As per the report, the global photorejuvenation equipment market is expected to favor growth, owing to the increasing popularity and acceptance of these systems for the treatment of numerous skin-related diseases, rising desire for flawless skin, and increasing disposable income of people in both developed and developing regions. For instance, a study conducted by the American Academy of Dermatology stated that acne is the most common skin condition prevailing in the US and is expected to affect 50 Americans per year. The photorejuvenation equipment is also proved beneficial in curing skin conditions like acne, rosacea, acne scars, angioma, matted telangiectasia, etc. Besides, the growing need for these hi-tech systems for the removal of unwanted hairs from the body is another driving factor that is expected to fuel the overall market growth. On the contrary, factors like the developing risk of skin

cancer along with the hypersensitivity to light are some of the growth restraining factors retarding the demand for photorejuvenation equipment across the world.
