

Austin McDaniel and Damian Miller Join Executive Team At CRFT

San Francisco, May 6, 2020 ([IssueWire.com](https://www.issuewire.com)) - CRFT, Inc., a no-code security automation company, announced today that Austin McDaniel and Damian Miller have joined its Executive Team as the Chief Technology Officer (CTO) and the Chief Customer Officer (CCO), respectively.

"I am extremely proud to have these two strong leaders come aboard," said Anton Goncharov, CEO of CRFT. "Austin's and Damian's wealth of industry experience makes them an ideal fit for our organization, and I look forward to having them help grow CRFT into a world-class company."

About Austin McDaniel

[Austin McDaniel](#) brings over 15 years of engineering leadership experience to his new role. McDaniel has had a stellar career with organizations such as Archer Technologies (now RSA), Department of Defense, MasterCard, Google, and JASK (now Sumo Logic), as well as led projects in the open-source software (OSS) community. In 2014, he helped found Swimlane, a security orchestration, automation, and response (SOAR) company, and led the early engineering team.

At CRFT, McDaniel had been involved from the early days of the company as a co-founder and an advisor/coach to the team, and will now take on a full-time role.

"We've set out to lower the barrier to entry into security automation by moving away from traditional code-heavy solutions," said McDaniel. "At CRFT, we wanted to build an intuitive solution that is future-proof, and building it natively in the cloud allowed us to drastically reduce deployment time as well as the total cost of ownership for our users."

About Damian Miller

[Damian Miller](#) has over 15 years' experience in cloud security leadership with a strong track record leading early-stage ventures and delivering transformative solutions to customers. Most recently Damian was the co-founder of JASK (now Sumo Logic), the first cloud-native SIEM to disrupt the security market.

"Security teams are overburdened more than ever with time-consuming low priority tasks that stall their productivity. CRFT delivers a unique no-code approach that enables customers to get started automating everyday activities in a matter of minutes, which frees up the experts to focus on higher-order responsibilities and planning," said Miller.

About CRFT

CRFT is the world's first no-code cybersecurity automation platform, which aims to empower security teams of all sizes to reduce the burden of manual workloads, improve efficiency, and streamline security operations.
