

Partakers: An AR Business Board Game for a Royal Family of Believers

PARTAKERS

London, May 11, 2020 (Issuewire.com) - Partakers is a one-of-its-kind AR board game that has been designed by Spence Recruitment Ltd. The game promotes teamwork, religious liberty and social networking so that the players can incorporate the same ethics and strategies in the real business environment also.

This innovative game allows the players to collaborate with others who equally believe in worshipping whomever they want and whenever they want while achieving the common goals. It is a unique platform that inspires harmony, empathy, like-mindedness, and integrity among the players so that they can help and support each other in making the decisions for the overall growth of the society.

Being a perfectionist, Keston Spence wanted to ensure that you get the right product that would help you in providing a platform to your employees where they can engage, practice, converse, and prepare to fulfil the ambitions in the real business environment in a harmonious manner.

After going through in numerous stages of prototypes, every detail that you see in the Partaker game today has been tweaked to precision for the Royal Family of believers. Since the game is in its progressive stage, partakers invite you to become part of our supports and they have something amazing to offer to the first 10,000 backers.

The goal is to raise the maximum number of Kickstarter backers and funding for the game itself so that more like-minded people can collaborate with their long list of supporters.

About Spence Recruitment Ltd.

Keston Spence and family members are the co-founders of Spence recruitment. They are a registered private limited company, who are re-banded to specialise in the provision of networking collaborations between religious believers within the business environment for employers and employee across the globe.
