

San Francisco based company to launch the O2 Mask amid COVID-19 Pandemic

The Innovative Triple Layer Nanofilter Mask Designed to Filter What Other Masks Can't

San Francisco, May 6, 2020 ([Issuewire.com](https://www.issuewire.com)) - Two San Francisco based female business owners joined forces in response to the pandemic and shortage of protective masks by creating the O2 Mask and co-founding O2 Brands, Inc.

Both females, minority business owners have immediately responded to this unprecedented event by combining their knowledge in manufacturing and resources in developing effective nanofiltration products to do their part in fighting off COVID-19. Combining their teams' of technologists and academic scientists with their background and expertise in textile and product design they've created a locally-made innovative face mask containing a nanofiltration membrane with the power to remove 99% of particles.

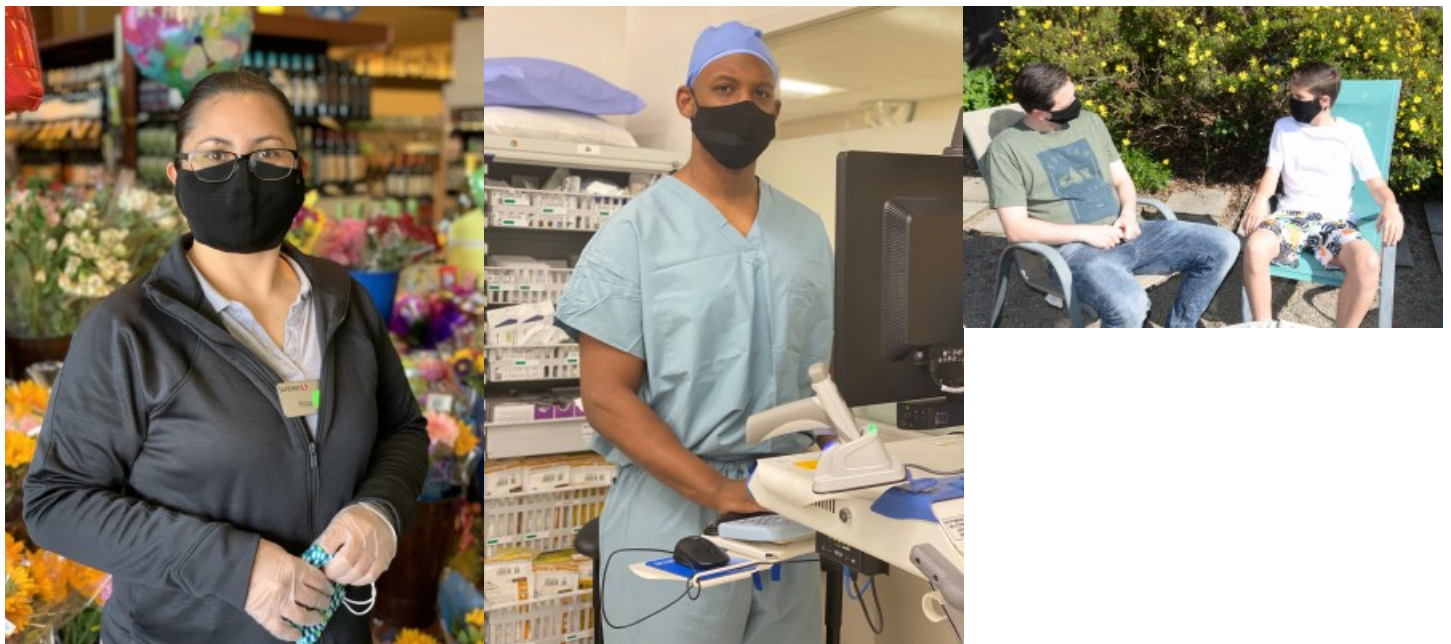

They've successfully accomplished their initial goal of creating a mask for the everyday user that would

efficiently slow the spread of viral respiratory disease and germs and are now ready to launch the second phase of their efforts with a “Buy One, Give One” Kickstarter Campaign.

Their model is simple: for every mask purchased, one is donated to a local essential service worker in need with priority given to first responders, grocery store clerks, delivery couriers, fire & police departments, and generally focusing donations to people who are putting their lives at risk daily to help our community.

The goal of the Kickstarter Campaign is to raise \$30,000 to maximize their full manufacturing capacity, allowing them to donate to 40,000 people in need over the next two months, and they need your help to do this, we are all in this together. You can support this cause by contributing to The O2 Mask Kickstarter Campaign which is scheduled to launch on May 12.

About the O2 Mask: This unique reusable mask is designed and manufactured in San Francisco. It is composed of nanomaterial membranes that are ~85 nanometers wide – about 1000x smaller than human hair, smaller than nearly all bacteria, and smaller than many viruses including influenza. Their unique nanofibers require less material to create an efficient filtration system while allowing air to pass through smoothly. It helps increase breathability and comfort while ensuring performance. O2 Mask offers an exceptionally minimalist and sleek design to suit any setting. It can be worn at work, on your next flight, or while you rediscover your home city on a staycation.
