

Social Distancing: The Move to Online Events sees the Creation of the World's First Virtual Video Booth.

Toronto, May 6, 2020 ([Issuewire.com](https://www.issuewire.com)) - VideoBooth Inc. announced the launch of VideoBoothOnline – the world's first virtual video/photo booth, created in part with their UK counterparts VideoBooth Systems Ltd.

Developed in response to live events being transitioned over to the virtual world, VideoBoothOnline

enables businesses to connect and capture feedback, ideas, and questions from their audience via the web as they move their events online. The digital-based platform works just like the company's traditional VideoBooths used at conferences, launches, and consumer events all over the world - but now entirely online.

VideoBoothOnline helps to engage and create inclusive relationships with audiences, making them feel part of an online event. At this time when we're forced to be apart, capturing genuine content from real people is of unquestionable value.

[What is VideoBoothOnline?](#)

Managing Director, Jon Stones, said *"We wanted to respond to the huge shift in the events industry which has seen live face-to-face events postponed due to social distancing. Our clients are now taking their events online and we want to support them with a platform to gather attendee video feedback, testimonials and photo content"*

VideoBooth Inc. is a Canadian based company and exclusive North American distributor for VideoBooth Systems Ltd. since 2006 and provides a wide range of automated VideoBooth and VideoKiosk solutions to the event, education, healthcare, and attractions industries.

Their past clients include Microsoft, Stanford, UPMC, Disney, Dell, Google, Coca-Cola, LinkedIn, among other great brands.

VideoBooth Systems design and manufacture a range of automated solutions for capturing and sharing video and photos. They've been at the very forefront of video booth technology since 2001 - their first video booth was produced for the BBC to capture vox-pop style news reports from the public at various locations around London, with the footage broadcast on BBC television news and online.

Since then they have continued to develop their technology and have worked with many of the world's best-known brands, including Virgin, Nike, Madame Tussauds, Formula 1, and Red Bull.
