

Protect Yourself and Your Community from Viral and Bacterial Contraction with DONY Anti-Bacterial Face Masks

You get out of your house to get grocery and face mask is the first item in your shopping list. But there are many face mask type and brand on the shelf. Which one should you choose to protect your family members and yourselves?

Thanh Pho Ho Chi Minh, Jun 18, 2020 (Issuewire.com) - Garment company, DONY has now expanded its merchandise line with the need of the hour product, face masks. The Vietnamese company based out of Ho Chi Minh City is whole sellers of premium washable and reusable face masks contributing significantly to the ongoing requisites of combating the coronavirus crisis.

Nowadays, owing to the pandemic situation, our grocery list contains face masks as a priority item. However, when in the store, we are spoilt for choice and often demented about which brand to endorse. With so many companies manufacturing face masks, it is difficult to identify the best quality ones that

will help in combating you and your family from contraction. Medical and health organizations across the world have released the ideal specifications that an effective face mask should have against hindering the COVID-19 virus from entering through our mouth and nostrils.

Criteria such as how many layers should a mask have or whether it is environmental-friendly, its comfort level, or its effectiveness in containing micro drops when we sneeze or cough is often being considered while buying masks. DONY Masks has come out with their line of face masks that are not only designed to functionally provide hygiene and caution but they have been officially endorsed by the US with over 10,0000 units donated as part of their responsibility during the pandemic.

A DONY face mask consists of three protective layers. The outer, water-resistant layer is the first amour and the frontier against air pollutants and viruses. If this layer comes in contact with a foreign microdroplet on its surface from another person while talking or just from floating in the air, there is no chance of it diffusing into the other layers owing to its water-resistant property. The middle filtration layer is special protection against viruses and bacteria, airborne particles, dust, and pollution.

DONY masks have incorporated a special property in this middle layer which is again composed of three sub-layers. Hence, the protection is more that allows you to wash the mask up to 60 times while maintaining the functional efficiency up to 99.99%. More reusability means less environmental waste. DONY face masks do not only protect you but also protect the environment where you live. The inner layer touches the skin of your face at all times.

If you have ever faced inconveniences with the dent on your face after taking off a mask, DONY face masks are comfortable and leave no such impression. The inner layer makes it comfortable to wear for a longer time. The inner layer prevents bacteria manifestation, especially bacteria that naturally exist in your saliva that does not release bad smell even after wearing a DONY face mask for a long time. Your microdroplet is restricted in the inner layer and the bacteria is killed there too.

DONY face masks' attribute as the best in the market does not just imply good fabrication but also incorporates effective protection. They come in protective packaging and undergo visual inspection to remove any defective mask. The masks are then put in individual bags and heat-sealed.

The heat sealing is crucial in making DONY face masks emerge as the best quality ones in the market. The heat-sealing process isolates the mask from the toxins of the surrounding environment. No dust or bacteria can get in the bag. In the next step, the DONY mask is sterilized.

After sterilization, they will not be touched by any human hands until the consumer tears the bag and wears it. The fashionable, individual bags are made from environment-friendly resin. You can wear the DONY mask right after unboxing and no 'wash before wear' step is needed.

The loop of the mask is made from elastic materials. It can be stretched to up to 270% of its original length. The DONY face mask loop will provide maximum comfort and your ear will not feel any pain even if you wear it at all times.

DONY face masks have permission to export to the US, EU market. DONY face masks received FDA certification to export to the US market. They also received CE certification to export to the EU market. DONY face mask also has the ISO9001:2015 The Quality Management System in its production processes and quality control.

The TUV Reach certification firmly confirms that there is no harmful substance causing any allergy.

DONY face mask got the INTERTEK global certification on water resistance with a score of a perfect 100. UV resistance is also scored at 99.95, an equivalent of any premium sunscreen lotion. The masks also have a breathing resistance, mmH2O of 1.8 which means that you can breathe freely and comfortably at all times.

DONY face mask uses only one type of fabric that is accepted by the US with persistent protection of up to 99.9% even after washing over 60 times. No other brand can assure this much safety and quality assurance. The wholesaler offers its export services across the world and is rapidly emerging as one of the best mask makers of current requirements.
