

Zharbiz: World Bank launched Cryptocurrency WaterCoin "Life" 2021

A group of entrepreneurs and investors supported and backed by the Cryptocurrency World Bank have launched WATERCOIN, the water currency "LIFE",

Philippines, Metropolitan Manila Area, Mar 6, 2021 ([Issuewire.com](https://www.issuewire.com)) - A group of entrepreneurs and investors supported and backed by the Cryptocurrency World Bank have proposed in the launch of WATERCOIN, the water currency "LIFE", a cryptocurrency for the promotion, financing, development, and operation of economic, socially acceptable, environmentally friendly projects.

The operational and security advantages provided by blockchain technology and the support of assets in natural resources will position WATERCOIN as one of the main cryptocurrencies that globally activate the economy and promote the conservation of the natural resources of our planet Earth and detail the technical foundations of the development of WATERCOIN, as exchange cryptocurrency and protection of the environment; we will also establish the development of this financial instrument with thousands of possibilities to make a better world.

Additionally, will establish the issuance method and the policies that will consolidate its use.

The economic, social and political crises at the national and global level, added to the lack of effective solutions to the issue of drinking water, have kept communities, cities and countries on edge to meet the needs of the vital liquid.

Currently, 2.3 billion people do not have basic sanitation facilities, such as toilets or latrines. According to the Joint WHO / UNICEF Monitoring Program for Water Supply and Sanitation, at least 1.8 billion people worldwide drink water that is not protected against fecal contamination. An even larger number drink water that is distributed through systems vulnerable to contamination.

Non-potable water and poor sanitation are the leading causes of infant mortality. Childhood diarrhea, associated with water scarcity, inadequate sanitation, waters contaminated with infectious disease pathogens, and poor hygiene, kills 1.5 million children a year, most of them under the age of five in countries developing.

The relationship between lack of water and sanitation with sustainable development goals is obvious, and solving the problem is profitable. Studies show that every dollar invested translates into a return of 9. That return on investment would specifically benefit poor children and disadvantaged communities that need it most. Therefore, by applying efficient solutions, it is feasible to promote comprehensive businesses and generate social welfare at the same time.

In response to this situation, a group of investors, entrepreneurs and the Cryptocurrency World Bank have decided to contribute what is necessary from a human, technological and financial point of view to create WATERCOIN.

This opportunity is unique to be able to finance and put all the necessary efforts so that everyone has access to clean water.

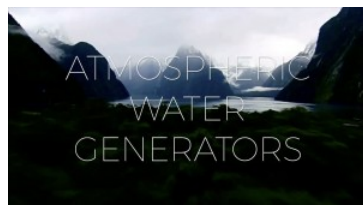

The volume of water on earth is estimated at 14,000 million cubic kilometers (KM³), but only 2.5% of this total (35 million km³) is drinking water. Of that 2.5%, 69.7% (24 million km³) is in the form of glaciers and ice, in Antarctica and the Arctic, 30% is in underground aquifers and only 0.3% is in the which is called surface water.

Water as a renewable natural resource and the investments made by the group led by Cryptocurrency World Bank in the drinking water sector, allow consolidating an asset to solidly support WATERCOIN; added to the technological and market advantages of Blockchains, an opportunity is generated for humanity in which everyone in the medium term has access to drinking water, "no one without water".

WATER COIN IS A UNIQUE PROJECT IN THE WORLD SUPPORTED BY NATURAL WATER RESERVES, INVESTING ITS VALUE IN PROJECTS SOCIAL AND SUSTAINABLE DEVELOPMENT, WITH OUR CAMPAIGN

"NO ONE WITHOUT WATER"

IT WILL BE POSITIONED IN THE MAIN EXCHANGE AND THE CRYPTOCURRENCY WORLD BANK WITH ITS INTERNATIONAL PLATFORM
