

Aesthetic Treatments and Innovation Preserve Your Looks for Years

Eric Cole, MD, FACS is the first physician to bring the most advanced, non-invasive technology to Washington States' West Sound region, providing patients with the potential to look and feel younger for decades.

Washington, Silverdale, Mar 10, 2021 (Issuewire.com) - Cole Aesthetics Center is a full-service aesthetic center that offers the best safety protocols and cutting-edge technologies while providing cost-effective solutions for a diversity of procedures. As Covid-19 forced many people to work virtually, it became apparent that video conferencing was here to stay. Simultaneously, Cole Aesthetics Center client K.Cooper, age 51 became increasingly self-conscious about her screen appearance. The signs of aging that she had been noticing were amplified on the screen during Zoom meetings and through other video conferencing platforms.

Ms. Cooper consulted [Dr. Eric Cole](#) of Cole Aesthetics Center to come up with a viable solution or procedure that will transform her look in the best possible ways. He and his team are known for always being on trend with the latest plastic surgery innovations and non-invasive procedures, committed to delivering top results. DR. Cole combines the procedures of Morpheus8, FACEtite, and [ACCUtite](#) to make his procedures effective in very little time. As per Ms. Cooper, after her initial consultation with DR. Cole and his staff at Cole Aesthetics Center, she learned that the combination of progressive treatments could help her look years younger without getting a traditional facelift or going under anesthesia. The painless procedure is being accepted by many as it is convenient and effective and does not require any pre-op maintenance.

[Morpheus8](#) uses fractionated energy, a scientific method that remodels, rebuilds, and stimulates collagen production. It targets the deeper layers of the skin, which then reorganize themselves for a natural anti-aging process. The most advanced facial contouring and refining technique, [FACEtite](#) is a good solution for someone not yet needing a traditional facelift and without large scars or downtime. This method results in dramatic improvements in skin elasticity on the face and neck, areas previously only treatable through a surgical facelift. FACEtite addresses saggy skin, jowls, double chins, and other areas with deep lines and loose skin. ACCUtite applies radio-frequency contraction, preventing the need for more invasive or excisional surgery. Because of its size, it is able to reach places with pinpoint accuracy successfully treating saggy skin and excess fat. Common areas include the nasolabial folds,

lower eyelid area, lower face, and neck. ACCUtite can also be used on the body. DR. Cole also extends his procedural scope in areas of the abdomen, upper arms, inner thighs, and knees.

<https://coleaestheticcenter.com/> DR. Cole will determine what treatments are the best solution for your goals. Each treatment offers unique solutions, and, when combined, they can achieve dramatic results. For further information about your possibilities, refer to the following contact details.
