

Breeze, Antibacterial & Face-Cooling Mask, Launches on Kickstarter

Breeze: the innovative respirator with evaporative face-cooling shell and patented gold-silver bactericide filters.

Rockville, Jul 20, 2020 ([Issuewire.com](https://www.issuewire.com)) - Ten days ago Artech, Inc. has launched Breeze on Kickstarter and already raised over 1000% of its funding goal.

Breeze is an elegant anti-pollution mask filtering dust, pathogens, and allergens and killing germs in the air. It's patent-pending main and exhalation gold silver-plated filters emitting silver ions that kill bacteria and viruses in the air a user breathes in and out. Breeze outer shell from polyester-polyamide blend providing effective evaporative cooling of user's face.

Advantageous components of Breeze include proprietary exhaling valves providing a "clear sound" for phone calls, a "foggy glasses" prevention shape, an ergonomic nose arch and zero-pressure ear-saving adjustable straps to make the mask more comfortable to wear.

Breeze is equipped with standard N95 or N99 filters. All other parts are reusable, washable, and long-lasting.

Ongoing coronavirus pandemic made people around the world concerned about own safety and COVID-19 spread. Face-protecting respirators are now mandatory life accessories, but most masks only filter dust, pathogens, and allergens from the air. Breeze is a step forward: it not just filters the air with N95 or N99 filters but also kills germs with silver ions.

Ionized Silver has been used by humankind for millennia as an extremely powerful natural, chemical free disinfectant killing harmful bacteria, viruses, and fungi. The gold & silver galvanic filters in Breeze emit silver ions capable of killing most of germs.

With masks being mandated in a lot of states and municipalities Breeze is the clear solution for comfortable and elegant upgrade to most existing face masks.
