

Propulsione Non Newtoniana PNN Reactionless drive, Non Newtonian Propulsion

THE POSSIBILITIES

Today, the PNN is still in its embryonic form since the engine is at prototypal stage. The thruster has passed the proof of concept but lots of known and unknown challenges lie ahead.

It's not a simple task. ASPS needs an industrial facility and the efforts of a team of skilled researchers and engineers to improve this unprecedented technology.

This is why we are asking for your contribution. Donate today to bring the science fiction closer to reality.

There aren't half measures to describe a technology like PNN. A satellite, a probe, or even a spaceship: once equipped with a PNN thruster has the potentiality to become something that nowadays only exists in science fiction.

Everything you have seen in movies, everything you have dreamed of when you gazed at the starry sky is now closer than ever before.

It won't happen tomorrow of course: there is still a lot of work to do, and we need your help to make the dream real.

THE
ELECTROMAGNETIC
NON NEWTONIAN
PROPULSION ENGINE

Roma, Jul 12, 2020 (Issuewire.com) - IMPORTANT ANNOUNCEMENT!

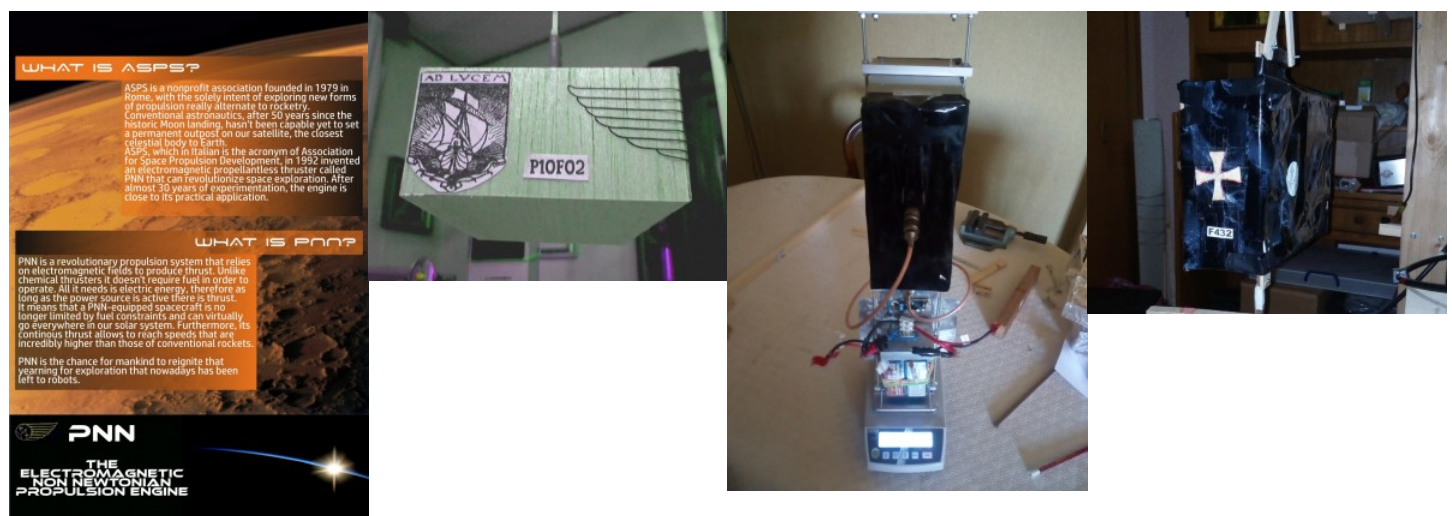

It is communicated on 10 July 2020 that on 16 July 2020 any acquisition of percentage shares of the new PNN patent of F432 will be blocked.

Therefore quota payments will not produce the purchase of quotas but donations to the PNN and its marketing www.asps.it/pnnecommerce.htm

It is important to always write BEFORE to asps@asps.it or to asps.ra1@pec.asps.name to find out if there are patent quotas available

Always read our primary url www.asps.it to know the progress of the situation regarding the timing of the dissemination of PNN know-how database and PNN Prototypes www.asps.it/pnnatabase.htm
