

Triumphus Renewable Energy Practice

Surviving The Storm

Houston, Jul 26, 2020 ([IssueWire.com](http://www.IssueWire.com)) - Unique Solutions for the Renewable Energy Sector

Triumphus has been servicing the technology and regulatory requirements of the Renewable Energy industry since 2004. We have assisted clients in remote, difficult to reach locations with obtaining internet connectivity and implementing Regulatory Security and Compliance Programs without breaking the bank.

Our work with both Traditional and Renewable Energy companies over the past 30 years has given us the knowledge to literally write the book on Surviving the Business Storm Cycle. [Triumphus](#) helps fast growing, startup minded Renewable Energy companies manage exponential year over year growth while dealing with the reality of budget constraints.

The Renewable Energy Sector faces many unique challenges during Construction and Operation. Triumphus helps clients overcome the following challenges and more.

- Remote locations make connectivity difficult at best;
- Physical security becomes increasingly important with these remote locations;
- Technologists must also be fabricators and carpenters as there is little if any help on site during installations or equipment repairs;
- Remote Operations Control Centers (ROCC) must be in compliance with NERC Regulations and Requirements;
- Generation equipment vendors are often onsite for the first few years supporting the project which can require 3rd party access to the Operations Network and the Internet while maintaining NERC Compliance.
- With Remote & Work From Home increasingly common, security of the Control or Operations Network must be protected from potential outside access;

Triumphus has helped clients successfully Design, Build, Connect and Operate more than 100 Wind and Solar project in extreme remote locations, both onshore and offshore as well as in highly secure locations, including a US Military Installation.

Triumphus has developed multiple unique solutions for the challenging, chaotic environments that make up Renewable Energy projects:

- Remote Office in a Box
- SubStation in a Box
- ROCC on a Budget
- Physical Security from afar
- NERC Policies and Procedures in a Box
- Remote Monitoring as a Service
- Patch Monitoring, Testing and Application as a Service
- Vibration Monitoring

Triumphus offers multiple Fixed Fee Services based on the number of locations, to help you Identity and Define various challenges including:

- NERC or NIST Regulatory Compliance State
- Cybersecurity Assessments
- Physical Security Assessments
- Business Plan to close Cyber, Technology and Regulatory gaps
- Strategic Technology Implementation Plan to come into Regulatory Compliance

PLAN AND PREPARE FOR INEVITABLE BUSINESS STORM CYCLES
