

How to prevent Corrosion under pipe supports with the help of Pipe rack jack?

Houston, Aug 21, 2020 ([IssueWire.com](http://www.IssueWire.com)) - Corrosion under pipe supports is a significant problem wherein the supports on which pipes were laid are corroded and need to be changed straight away. All this makes the tasks barred and needs to turn it cleaned instantly.

Unfortunately, indulging in lifting all those heavy pipes and afterwards changing the supports to carry on the maintenance and repair process is a challenging and time-consuming task. Thankfully, the solution is here.

Ovolifts' Pipe Rack Jack is a tool designed to allow you to lift those pipes easily before doing any maintenance work. This is the straightforward and flawless solution to remove Corrosion over pipelines in support areas.

The **Pipe Rack Jack** just worked like changing a flat tyre. Here you lift the pipe using the pipe rack jack as you do with lifting the car with a jack. Once the pipes are lifted, then Corrosion can be removed easily and to the fullest. Thus, avail of this tool to keep your pipeline durable and entirely workable.

The Ovolifts solution enables operators to address touch point corrosion on a planned basis on in-service pipes before they become critical and result in an emergency shutdown, extended turnaround or a line replacement.
