

Leading Hotel Soap Dispenser Company Launches Hand Sanitizer Fixture in Response to COVID-19

Concord, Aug 28, 2020 ([Issuewire.com](https://www.issuewire.com)) - Aquamenities is responsible for creating the very first sophisticated stainless steel, locking and tamper-resistant sustainable soap dispenser for the hospitality industry and has responded to a clear need of their clients with a single bottle fixture that presents hand sanitizer. At the beginning of the Coronavirus pandemic breakout, hand sanitizer fixtures were difficult to find. Businesses were struggling to provide comfort, safety and peace of mind for guests and clients as they could not supply sanitizer in readily available places, areas with the greatest traffic. This pressing problem forced businesses to choose only low-end plastic models to meet the demand.

Fortunately, [Aquamenities](#), with a focus on upscale properties, created an elegant wall-mounted fixture designed to enhance the guest experience, prevent theft, and safely limit access to the product by guests. Its zero waste operation removes the waste associated with small bottle amenities, both in plastic and product. Aquamenities fixtures can help hotels and other businesses flatten the curve while also minimizing the damage to the environment.

Aquamenities' main priority is providing sustainable options for top-tier hotel chains such as Intercontinental Hotel Group, Hyatt, Omni and more.

"We not only saw this as a business opportunity but a way to help our clients and their guests stay safe during this pandemic," said Aquamenities founder and CEO, Ken Haworth. "Now our clients are able to provide hand sanitizer in all high traffic areas such as lobbies, elevator banks, hallways, and guest rooms. This fixture is perfect for not only hotels but any business that is running during this time."

This elegant fixture will fit nicely into any setting without taking away from the property's aesthetic and guest experience. An added benefit is that the fixtures are easy to clean/sanitize, and do not require batteries or any electronics to monitor.

Hand sanitizer is a must in today's world and that is not going to change anytime soon. There is no telling how long this COVID-19 crisis will last, and it is important to take every precaution starting with Aquamenities' new hand sanitizer fixtures. Aquamenities products are available for public spaces and private household use.

Although Aquamenities is headquartered in the San Francisco Bay Area, they serve clients from all over the world. The hand sanitizer fixture will be an elegant option for businesses even post-pandemic.

About Aquamenities:

Aquamenities was founded by Ken Haworth who has been providing the hospitality industry with sustainable, high quality, innovative products for over 25 years. He designed and patented the first fully customizable, stainless steel, tamper-resistant amenity dispenser fixture which has been placed on over 450,000 hotel rooms around the world including Four Seasons Intercontinental, Hyatt and others. One 3-bottle amenity fixture in only one hotel room eliminates up to 1000 small plastic bottles and 5.5 gallons of unused product from landfills each year. Last year alone Aquamenities saved 45 million bottles and 2

million gallons of partially used products from landfills providing a zero waste solution. Additionally, Aquamenities has saved hotels an average of 39% over their small bottle amenity purchases by directly reducing the costs of amenities and limiting freight, trash, and labor normally committed to the ordering, storing, placing, cleaning, and removing of small bottles.
