# Spartan HUD Crowdfunding Coming Soon - FAQs Released in Advance

**Toronto, Aug 4, 2020 (Issuewire.com) - Spartan HUD is creating the future of practical wearable technology with its innovative heads-up display helmets.** Pre-order now at www.spartanhud.com

Spartan HUD, a Canadian startup and technology innovator, today unveiled its Spartan HUD Helmet (Flagship Edition), a sleek and powerful augmented reality helmet for working smarter, accessing critical information, and creating new entertainment experiences. The helmet augments the user's field of view display by featuring a powerful computing environment with a full day of battery life, all in a comfortable helmet form factor.

Nearing the unveil of the crowd-funding campaign, the company released a FAQ (Frequently Asked Questions) answered by company founder and CEO James Schuback.

Frequently Asked Questions:

- *How long does the battery last?* A. ”The rechargeable battery keeps Spartan HUD running for 8 - 12 hours, depending on usage patterns.”

- *Will I be able to use Spartan HUD with glasses/contacts?* A. ”Yes, Spartan HUD will fit most standard glasses and eyewear (contacts are fine too). Adjustable magnification internal to the optics allows a comfortable visual experience for all.”

- *What head sizes will fit?* A. ”With our adjustable easy-twist lock strap, all standard head sizes covering 99.5% of the population should fit. If for whatever rare reason it doesn’t work for you, we’ll offer you a full refund.”

- *Does Spartan HUD stay logged in all the time?* A. ”Yes, by default settings that can be changed. You can also add a pin or text password to boot in via the included keyboard controller.”

- *Can I request custom add-ons or changes, like sensors, battery, CPU specs, etc?* A. ”Yes - the reward options we have represented a small subset of what we could do with Spartan HUD. Contact us directly (info@spartanhud.com)describing what you’re looking for, and we’ll quote it and create a custom order for you.”

- *Can I upgrade the storage of the Flagship unit?* A. ”Yes, through USB devices and/or the micro SD slot.”

- *Is it weatherproof?* A. ”At this time, the Spartan HUD Flagship model is not recommended to submerge in water or other extreme weather phenomena. Future versions later this year will have more capabilities in this regard, some released as add-ons for the flagship model.”

- *Can I use Spartan HUD like a regular computer?*“ A. Yes, we are making available the full desktop suite of the default operating system, as well as our initial software. The on-board computer can also connect to other displays via HDMI or VGA. You’ll be able to use the helmet like a desktop computer and plug into an external monitor!”

- *Can I upgrade and swap components?* A. ”Yes, the Spartan HUD Flagship edition was specifically designed to be very extensible and customizable. Everything from the computer to sensors to battery can be swapped and/or upgraded. Contact us for more info.”

- *How does it charge?* A. ”We include a high powered wall outlet charger. Quick charging can replenish the battery in 1-2 hours.”

- *Are any features likely to change between now and delivery of the first units?* A. “Some technical features are subject to change, but this is mainly due to factors such as swapping one similarly powered CPU for another comparable one (due to supplier constraints). The aesthetics could have somewhat of an overall, and we’ll be sure to keep backers posted for feedback and approval. Additionally, we’re looking at sneaking in a few extra components free-of-charge, such as mounted flashlights.”

- *What if I have any problems with product defects, need to return, etc?* A. ”Contact us within 30 days after receiving your Spartan HUD. If our support staff can’t help you remotely, feel free to ship back your merchandise and receive a full refund, or apply for a replacement.”

- *Can I paint my Spartan HUD, add stickers, etc?* A. ”Yes, and we’d love to see what you do with yours!”

- *How long have you been building Spartan HUD, and what were the biggest challenges?* A. “We started conceptualizing in early 2020 and quickly moved on to prototype iterations thereafter, culminating in our crowd-funding campaign coming within the next week or so. The main challenges included finding the right cost-benefit trade-offs for various features when combining all the technology. Another major challenge was being cost-efficient and somewhat creative with prototyping, as we started the company with a small amount of personal savings, and have held off on outside investment. We want to maintain a laser-tight focus on the vision and execution before we bring in any outside resources, to make sure we’re targeting something the people want.”

**About Spartan HUD**

Spartan HUD is creating the future of practical wearable technology with its innovative heads-up display helmets. The company designs and builds its products across its locations in North America, and utilizes overseas suppliers and manufacturers for various components.
