

China Hair Curler Factory Showcharm Proudly Brings Quality Hair Curlers

Shenzhen, Sep 10, 2020 ([Issuewire.com](https://www.issuewire.com)) - Show Charm [hair curler factory](#) invades the global hair styling landscape with their unique wave hair curler.

The biggest challenge in hairstyling is to find the right hair curler that delivers cute, voluminous curves without damaging hairs. The basic reason for damaging and breaking hairs is the curling tools that do not distribute the heat evenly. While a majority of the hair curlers deliver desired curls, they do it at the cost of heat deterioration. Most of them almost fry hairs damaging the hair strands and hair textures.

Show Charm [hair curler wholesale China](#) has integrated R & D facilities. “As a company committed to the beauty and wellness of the women, we create various styling tools for daily use of women. Our wave hair curler not only delivers gorgeous curls but also nourishes and restores hairs every day,” said the CEO of Show Charm. “We know that women like to buy safe devices that make them look good and feel good. As such we always put technology ahead of everything and that is how we made our presence in the global market, the CEO further added.

Show Charm has a strong footing among [hair curler manufacturers](#) because of its product quality and innovative technology. The hair curler features Tourmaline ceramic heating, with high speed

performance.

The use of German X7 core technology ensures high-speed heating. It lets one get natural curls conveniently within a minute. The Tourmaline ceramic panel adopts an innovative Omni-directional heating technology and ensures uniform heating without damaging the hairs. It changes the protein structure of the hairs for creating beautiful curls

The great part of the curling tool is the tangle-free sensor with a detector control. It never pulls or pinches the hairs while getting curls and the automatic sleep mode makes it safe to use.

The curler also features an LED display for time, temperature, and direction. It allows the user to watch the parameters for gaining control of the process. The time setting option allows setting at 8, 10, 12, and 15 seconds and the temperature can be adjusted with a range from 140 to 230 °C with a 20-degree step.

About

Show Charm Precision Electronics (Shenzhen) Co., Ltd was established in 2012.
