

## GenesisOne Revolutionizing the Cryptocurrency Platform through Blockchain Technology!

**Singapore, Sep 10, 2020 ([IssueWire.com](http://IssueWire.com))** - GenesisONE is a cryptocurrency platform that will utilize diverse businesses and projects globally to bring sustainable value to its members. By entrenching itself into communities globally where the greatest needs exist; GenesisONE looks to embrace marginalized and neglected peoples to cultivate, develop and elevate them and their communities to allow for the exponential growth needed in global GDP to bring equity to all.

GenesisONE's launch of a CyberLottery, Sportsbook, and Virtual Casino allows for maximum exposure across cultures and serves as the initial stream of revenues thereby adding value to the underlying GenesisONE Token. These systems are already in phase two development and will continue forward with completion toward the end of October/beginning of November. These are the first forays into our global initiatives that will allow for maximum exposure and penetration facilitating future projects and investments. Furthermore, the launch of the NeoGenesis exchange and wallet will allow advanced financial trading operations to take place across crypto, stock, commodity, and currency pairs. Members can trade options, conduct algorithmic trading, quantitative trading, and utilize levels of margin to enhance their portfolios.

After seeing 2017's enormous growth in cryptocurrencies, 2020 has proven to be a remarkably difficult

and volatile year for bitcoin and cryptocurrencies and it's going to seem as if there is no predictable and stable "light" at the end of the tunnel for the market. However, with the growing use of decentralized finance, the current quarter and for the foreseeable future all signs are exhibiting that cryptocurrencies can transcend just speculation, with partnerships and adoptions such as GenesisONE being on the increase.

At the same time, running a small business comes with plenty of challenges like payment processing, accounting, social media management, website maintenance, and brand name. That really makes a hole in the pockets of retailers and businesses alike. However, if they manage to put their businesses online and try to reach the global audience with larger volumes they still are mired in dealing in small fees that steadily cost more and more and subtract from your bottom line. **GenesisONE** aims to solve that by cutting intermediaries.

At each juncture, tranches of GenesisONE will be made available to facilitate individual investment into our programs for future dividend rewards. While developing the GenesisONE Ecosystem – GenesisONE Token, GenOne Coin (stable coin), Exchange, and Wallet, the team has acquired licenses in Estonia for deployment for both the Exchange and Wallet. That exhibits how the team is focused on developing an entire global ecosystem to revolutionize current industries and allow GenesisONE to become a ubiquitous global means for transactions and allow all marginalized communities to effectively be harnessed in viable development, growth, and prosperity.

GenesisONE operates as a traditional venture capital-funded project with series funding rounds whereby they have had their seed round/Pre-ICO and following that up with a more global inclusive round, the Series A funding - ICO. Provision is underway for the next wave of projects dealing in Banking, Trade, reliable and passenger-centered airline operations, and Infrastructure and community development. There are future rounds planned at each completion stage for designated projects illustrating our minimum viable products for that funding stage.
