Uquid Launch the Defi Shopping Stake (DSS) and Defito Finance (DTO)

Ready to live in the Next 48 hours

Aigrumae, Oct 7, 2020 (Issuewire.com) - The trouble with many current DeFi projects is that while they eliminate traditional institutions from the mix, they instead transfer ultimate control over to a select group of insiders who have their financial motives and agendas. It's an arrangement that's ripe for abuse, and something that should be anathema to anyone who believes in the real promise of DeFi.

But now, there's a DeFi solution that's on a mission to deliver where so many others have failed. It's called the Defito (DTO), and Defi SHopping Stake (DSS) is designed to be a platform that a Bridge between Defi and E-Commerce.

Know about DTO?

A **DTO** token controls Defito Ecosystem. Defito is a decentralized finance (Defi) platform with the goal of providing a solution for Defi to access e-commerce such as :

- Shopping Mining
- Shopping Staking
- Automated Shopping Making

DTO is the native token in the Defito platform. Users can earn it by contributing liquidity to Defito's liquidity pool and use the token for Platform Governance and Online Shopping.

YOUR STAKE IS SAFE WITH US.

Know DSS (Defi Shopping Stake)

We are proud to introduce DSS to the public for the first time. We believe that the Defi Shopping Stake (DSS) model will be used more widely in e-commerce companies in the near future.

DSS is a Defi-oriented enhancement of the Loyalty program system. As usual, each customer will have to show loyalty cards (also known as Rewards cards, Points cards, or Club cards) and Present them after each successful purchase (including online shopping) to collect the Reward Points.

From now on, each wallet address used for payment will automatically be used for bonus recognition after each order is completed. The customer's rewards points will be recognized with the smart contract and available for Spending at any time.

Also, Introduce Burn Mechanism & Governance

Token Vote: The community has some right to vote for a burning token from the shopping treasury. If they want token keep for further development of the reward system or Burning for growing value of DSS.

Burn Mechanism

- Burning Mechanism work only for DSS, Not for DTO.

- DSS reward will be spending in Uquid Digital Shopping for Payment. The same Amount in the Uquid Shopping treasury will burn.

Governance

- Burning Mechanism is work based on governance (Annual Voting).
- DTO holder has the right to vote for burning DSS in the treasury.

How to Stabilize DSS Value?

- The number of DSS tokens generated by staking and mining is limited.

- If the community votes for DSS token burning, the number of tokens will become scarce.

- When the amount of tokens in the shopping fund is burned. A further amount of tokens will be repurchased from the market. This process continued over time and will significantly increase the DSS value.
