

Testing Service Crestech Global launches an Assured Application Integrating Performance and Security

**ONLINE
LEARNING
GETS ITS
MOMENT DUE
TO COVID-19
PANDEMIC**

Noida, Oct 14, 2020 ([Issuewire.com](https://www.issuewire.com)) - Software and application testing service, Crestech Global launches their assured application with an aim to integrate compatibility, performance, and security through their testing.

This year will be even more difficult because the COVID 19 caused the store is closed. As a result,

online sales will experience an unprecedented increase over previous years. Online sales intermittently fall prey to cybercrime. The rate and technologies of fraud are also dynamically clearly changing with about 3,000 to 4,000 complaints per day compared to 1,000 complaints per day. As a result, online sales platforms need a high level of security. However, before entering the online business, application developers must test their applications on their performance, functionality, and security before marketing them.

Performance testing is dedicated to managing, validating, and monitoring the performance of the application and software throughout SDLC. It is focused on improving the overall performance and end-user experience. This is where CrestechGlobal's innovation comes into play in making a safe foundation for the systemic and successful integration of functionally accurate mobile applications.

For continuous testing and performance improvements, it is critical to set up mature monitoring through a Performance Governance Centre. Key Performance Indicators of an application are Speed, Ability to Scale, and Constancy on varying loads. These performance indicators should be monitored, controlled, and tracked for all applications.

Director of [Crestech Global](#) Mr. Lalit Jain said "Digital being the primary channel of delivering services to clients just validating the functionality of an application is not enough. Ensuring a 360-degree quality check brings that 4-5 star ratings and a substantial user base are more reachable. The quality assessment of a Mobile App is incomplete without Compatibility check across a range of end-user devices, validation of its performance on heavy load, and assurance of end-customer data safety!"

With a one-time payment option, subscription options, and on-demand assessment, CrestechGlobal's application aims for a better [performance testing strategy](#) for their clients. They check application performance in all geographic areas and designers need to be reassured that the application is suitable for all customers, regardless of where it is located.

Mobility and easy access to applications even under maximum load is also considered. With cloud testing and maximum speed in the processing of transactions, Crestech Global is rapidly expanding its dynamic technical curve to serve their clients.
