

W4G Track Recovery - A Stolen Car Recovery Company

Exeter, Oct 29, 2020 ([Issuewire.com](https://www.issuewire.com)) - Introducing W4G Track Recovery, a company dedicated to tracking and repatriating stolen vehicles in the UK and in parts of Europe. As a relatively new company, W4G Track Recovery has made a real impression in their industry throughout 2020, bringing about terrific results for their clients month on month. The company W4G Track Recovery is an associate of [W4G Fire & Security](#), a UK security company that provides all types of security services.

With a committed team of specialist stolen vehicle tracking and recovery personnel, the company has accrued impressive figures and ultimately continues to reunite expensive assets with their rightful owners. In the month of February 2020 alone, W4G Track Recovery managed to recover 96% of all vehicles that were reported as stolen to them. There were in excess of 60 cases reported to the company in that month.

W4G Track Recovery has employees dotted all over the UK, so that the company can respond to a report of a stolen vehicle by deploying the nearest staff member. The stolen vehicle experts determine the whereabouts of most of the cars through GPS trackers that have been fitted. However, on occasions this luxury isn't afforded to them.

In these scenarios, the vehicle theft specialists have to rely on developing leads on the intelligence available to them. Combining this intelligence with insightful research on crime patterns in the given area leads to the recapture of the stolen vehicle more often than not. This process of developing leads and using the information at hand, as opposed to hoping to come across the stolen vehicle on the streets, is what drives real tangible results for the company.

W4G Track Recovery, as an established asset investigation and repatriation company, works alongside the police and local authorities to help return stolen vehicles to an individual or a company who the car belongs to. [Stolen vehicle recovery](#) is at the very heart of what the Track Recovery team does, yet there are many sets of individual tasks that help the company achieve their objectives.

This includes overdue vehicle services. Upon receipt of an overdue vehicle hire, the company will carry out a defined process, which includes the use of a case management system and a string of responsibilities that are carried out in person. Another consideration that W4G Track Recovery makes is data mining and analytics, which entails close analysis of people, trends and patterns in order to prevent ongoing concerns and forecast potential red flags.

These are just two of the specialist areas that contribute to high repatriation statistics achieved by W4G Track Recovery. Their case and agent recovery management protocols also contribute heavily to the success of their stolen car recovery operations. W4G Track Recovery continues to achieve impressive recovery statistics and are quickly developing into a leading name in their industry, working with authorities more and more to bring about justice.

To find out more about the company and how you could enlist their services, visit the W4G Fire & Security website.
