

Flotilla IoT introduces new features to its Fleet Management System

New features in Fleet Management System

Dubai, Nov 4, 2020 ([Issuewire.com](https://www.issuewire.com)) - Flotilla IoT announces the introduction of new innovative features to its fleet management system. These features are added in the dashboard and monitoring modules with a purpose to make them more convenient and user friendly.

New features have already been implemented on Flotilla IoT's [fleet management software](#) and are fully functional. The details of these new functionalities are listed below:

New Features in Dashboard:

- 'Geofence' option is added in the main dashboard display which shows names of all the geofences created along with the number of vehicles inside them.
- The 'Staff' option is made clickable, and the user can view the details about the driver, including the vehicle ID and Name.
- The top ten vehicles with most engine hours and mileage are displayed in the descending order on the main dashboard display.

New Features in Monitoring:

- The maximized zoom feature is added in the live monitoring so that the user can view the exact positioning of the vehicle on the map more accurately.
- The feature of copying the coordinates of a vehicle's location is added, and the user can copy by clicking on the option next to coordinates.
