Forte 1 Technologies launching Decentralized Finance Solution to offer access for liquidity amongst coronavirus pandemic

Mahe, Nov 3, 2020 (Issuewire.com) - Decentralized finance (DeFi) is disrupting and innovating the financial sector with services that augment the capabilities of traditional financing institutions like banks. Forte 1 Technologies, a technology company that automates arbitrage through Artificial Intelligence (AI), is announcing the launch of its platform for investing and access to liquidity that provides better terms and flexibility than traditional financing institutions.

Digital assets are proving to be resilient amidst a backdrop of economic uncertainty brought about by the coronavirus pandemic. However, one challenge faced by investors is finding the right platforms and strategies for investing in the cryptocurrency market. Forte 1 Technologies empowers investors to grow their capital with as little as US$100in short term contracts.

Through its F1 Arbitrage Engine, Forte 1 Technologies is able to generate returns hourly by trading various digital assets. The F1 Arbitrage Engine is a cutting-edge data collection and analysis trading bot, which extracts huge sets of live trading data from online exchanges and runs them to ensure profitable trades.

Investing in cryptocurrencies can be challenging for both beginner and advanced investors, which includes the process of undergoing know-your-customer (KYC) procedures, establishing a digital wallet, choosing the appropriate asset types, and monitoring the performance of their portfolio. Crypto asset management solutions like Forte 1 Technologies will make investing more accessible to all types of investors by managing the technical and operational aspects, providing growth without a high level of involvement.

The platform provides fast settlement, zero trading fees, and one-second transaction time accuracy, in addition to capturing up to hundreds of different trading combinations per second. Investors can withdraw their funds at any time, providing a low-risk and high-liquidity investment option compared to conventional investment tools.

The F1 Arbitrage Engine will benefit different stakeholders in the digital asset ecosystem. Investors gain from low barriers to entry, low risk, and high liquidity in their portfolios. Cryptocurrency exchanges benefit because of increased liquidity, higher trading volumes, and larger trading fees.

Forte 1 Technologies enables businesses to redefine the landscape of investments, loan portfolios, and arbitrage by providing users a very flexible means to invest their assets while providing significantly higher portfolio growth than traditional instruments.

The visionary Elon Musk once said, “It’s ok to have your eggs in one basket as long as you control what happens to that basket.” When investing your assets, a common phrase is that you have to diversify your assets. In a volatile environment such as the financial markets. Diversity is key. But what about an environment you have control over? In order to truly excel in your field, you need to invest at least 10,000 to have become a professional. 10,000 hours working with computers to build Windows OS. 10,000 hours in practicing music to be the Beatles. Is there any room for diversification when gaining mastery in a single field? This seems to be the case as Forte 1 Technologies are good at what they are doing and keep perfecting their craft, as they stand by their great product with their expertise in this field.

In the ever-growing crypto exchange market, companies like Forte 1 Technologies takes trading to new heights. Their mould-breaking platform has no trading fees, and their low barrier of entry for all types of investors interested in gaining exposure in the cryptocurrency market seems like a smart investment choice.

About Forte 1 Technologies

Forte 1 Technologies is a technology company established in 2020 by a passionate team of computer scientists and engineers with expertise in AI, data analysis, distributed systems, and marketing. Initially founded to provide artificial intelligence platforms to help private companies with their arbitrage needs, Forte 1 Technologies now offer short-term risk-free investment solutions to the masses through its proprietary F1 Arbitrage Engine.
