

Southern Chem Industries Announced Today The Launch Of Its Newest Subsidiary MOON LITE LLC

Los Angeles, Nov 5, 2020 ([Issuewire.com](https://www.issuewire.com)) - Southern Chem Industries announced today the launch of its newest subsidiary moon lite LLC. Unlike Southern Chem that has traditionally focused on the industrial sector, MOON LITE's focus will be in the retail, food, commercial, and healthcare sectors.

Southern Chem Industries is a family-owned and operated company founded in 1971. The company

was established in LaPlace, Louisiana to supply industrial facilities along the Mississippi River Industrial Corridor from Baton Rouge to New Orleans and has since expanded throughout the South Eastern US with its cleaning products and services. Through the years additional products and services were added and they now serve customers in the oil exploration, refining, petrochemical, transportation, maritime industries, and the Louisiana sugar industry.

In April 2020 when the world started to experience the shortage of supplies in the US due to the Pandemic, Southern Chem stepped up to help lessen the burden put on an already taxed supply chain and started manufacturing hand sanitizer. As the Pandemic continued, it became apparent that there was a lack of US-made quality products designed to prevent the spread of Covid-19 and other deadly viruses on the market so MOON LITE was launched. “We see a huge void in this space,” said the President of MOON LITE, LLC, Michael Levine. We believe our products are equal or superior to those of the traditional brands that exist today and are more reasonably priced. By having them manufactured in the United States it gives us more control of the supply chain to avoid shortages on products like we have seen happen with other brands.

The MOON LITE’s products are designed to kill bacteria and viruses such as SARs -CoV-2, the pathogen that causes COVID-19, helping to slow the spread of the deadly germs. The brand was designed to provide products manufactured in the US with quality ingredients at a price point that would be more affordable than the big names in the disinfection, sanitization space that are currently running low or are out of stock as they have maxed out their production capabilities.

The MOON LITE product portfolio includes a cleaning disinfectant category. Products in this category include Eco-friendly Hydrogen Peroxide 3% disinfectant available in both spray and wipes, EPA approved Hypochlorous disinfectant spray, Citric Acid disinfectant available in both spray and wipes, N-Listed IPA and dual Quat formulated wipe. In the Antibacterial/ Sanitizer personal category they offer a 70% USP IPA sanitizer in liquid, gel, or wipes (designed specifically for those in the medical field) 70% Ethyl Alcohol sanitizer in Liquid, Gel, or Wipes- available in Scented (Lemon Grass) & Unscented and a Sulfate, Phosphate and Paraben Free Anti-bacterial Hospital Grade Hand Soap. The products will be available for purchase through Retailers, Industrial Wholesalers, Medical Suppliers, Food Service Suppliers, and various eCommerce sites. We are also committed to offering our product to those in the public sector .” We built this company to help protect our citizens” said Michael Levine “ so we will supply our products wherever there is a need.”
