

AHSL synonymous for accurately testing OHS/HSE as well as Geotechnical parameters in Dubai, UAE.

Best testing Laboratory in Dubai, UAE

Al Qusais, Dec 29, 2020 ([Issuewire.com](https://www.issuewire.com)) - Al Hoty – Stanger Laboratories (AHSL) is a Saudi-British partnership since 1975, that carries with it the expertise in scientific testing, gained over a span of 100 years, through its strategic alliance with the former associates and the successive generation to the founders of the British Company, Harry Stanger Ltd., that had been established in 1874.

AHSL was the first to be an Accredited Testing Laboratory awarded by the Dubai Municipality in 1996. With the growth of AHSL's credibility as a competent testing laboratory, it developed rapidly. More and more businesses kept joining AHSL as clients and with the progress and advancement of AHSL as well as its clients, AHSL had to expand its reach to do offshore testing too, thus AHSL upgraded to the accreditations as Testing Laboratories also from International authoritative bodies. Starting with NAMAS back in the late '90s, while ISO/IEC 17025 by ENAS / DAC being amongst the most recent and coveted ones, making it the best testing laboratories in the UAE.

AHSL has an all-subsuming assortment of tests related to Occupational-Health-&-Safety (OHS)/ Health-

Safety-&-Environment (HSE) and/or Geotechnical functions. These tests are pivotal for deducing the existing parameters of the elements involved as well as the optimum calibration levels according to the vital processes and/or repairs that are crucial for executing any projects fluently. To condense the list of tests and conveniently covering the most essential factors as well as the important elements that are the primary constituents to be tested, AHSL has categorized the testing as follows:

- Testing of Construction Materials necessitates the testing of the physical, mechanical and chemical characteristics of Concrete, blocks, tiles, pavers, steel, etc., as well as Geotechnical elements such as Soil, Aggregates, groundwater, etc.
- Testing of Analytical Chemistry is our specialization for over 35 years, which is widely used for analyzing the food and water quality frequently rendering our services to WHO, British Standards, American Public Health Authority, and other national/international standards as well as the wastewater quality discharged from industrial plants.
- Testing of Microbiology is done for assessment of health risks in private and public buildings, AHSL played a major role in the detection of Legionella sp. for clients across the UAE. AHSL does extensive testing for the premier hotels, restaurants, malls, and hypermarkets across UAE, especially Dubai.
- Testing of Environmental parameters, AHSL is one of the pioneers conducting Environmental Impact Assessments – sound level survey, pollution monitoring, air quality testing, water, and wastewater analyses. AHSL has been accredited by a number of public-sector organizations in the UAE, including the Dubai Accreditation Centre (DAC) as well as ISO 17025 by DAC & ENAS for various tests in Water, Air Quality, Noise, and Emission monitoring.
