

How HROne is empowering 100s of startups?

Noida, Dec 23, 2020 ([Issuewire.com](https://www.issuewire.com)) - HROne has introduced a new plan for startups keeping in mind the challenges businesses are continuing to go through. A basic plan and one advanced plan with 3 and 9 integrated modules and a mobile app for free. There is also an option to make monthly payments if yearly payments seem to be undoable right now!

The plan is introduced with an aim to help startup companies thrive in this new world of work and prevent the sabotage that might happen. When companies will need not worry about their employees

payments, attendance, performance and engagement, they would be able to cease the world with their innovation and ideas.

We went on to ask more about the plan and reason as to why when no other HR software company seems to be thinking of this, HROne took this initiative.

We first went ahead to ask the Co-founder Mr. Karan Jain and this is what he has to say about the reason to move forth with this idea-

“More than any other time, this year, especially the initial month have been extremely torturous for the startups. The number of challenges that startups have faced is endless. On top of it, the urgency to buy HR and payroll software also came up. So, we worked on a la carte for such businesses and released a new package to show them how they can benefit from our mobile-first future-ready HCM without digging a hole in their pocket.”

Mr. Nitin Bisht, Associate Director Sales also stated, “The package is by far been the most in demand this whole year. We are glad that we were able to accomplish our mission to empower startups. In the past month itself, we have been able to rescue 100+ companies through the difficulties that the pandemic has led to.”

What the future beholds is what we can never predict aptly but this year HROne HRMS has shown us how to actually lead the way and come forward to help the community with empathy and compassion. Isn't it?
