

HuntVe OnRange™ Lithium Electric 4x4 UTV

Fort Worth, Dec 24, 2020 ([Issuewire.com](https://www.issuewire.com)) - Two years after launching the Terlingua all electric 4x4, HuntVe is introducing the new Onrange™ (pronounced on-range) *lithium-ion* powered electric 4x4. Following years of product development, the introduction of this high performance lithium-ion powered UTV provides outdoorsmen the best performing electric 4x4 in its class. This new light weight big punch battery technology, combined with the HuntVe's category exclusive dual motor drive system, gives the Onrange™ the maximum agility, smooth ride and performance. The battery pack requires no maintenance and has the ability to stay in storage for several months without losing its charge. In 2016, the HuntVe Switchback™ hybrid- electric UTV offered new technology not available from any other manufacturer and generated a huge demand. The Onrange™ is set to do the same thing starting Q2 of 2021.

“Our only limit is our ability to produce more side by sides”, sales manager Mike Petrovich says. “We have developed a reputation as the leader in electric and hybrid-electric off road performance. There just is not another vehicle that can compete.”

MGE was founded and has been manufacturing the HuntVe line of electric off road vehicles in Fort Worth, Texas since 2006. For more information, see HuntVe.com or email mike@huntve.com
