

Newdawn Roamers, an excellent science fiction novel by Dominique Luchart, sees a surge in interest going into 2021

San Francisco, Dec 14, 2020 ([Issuewire.com](https://www.issuewire.com)) - Author Dominique Luchart recently announced the release of her latest science fiction novel/fantasy, *Newdawn Roamers: Prequel to the Newdawn Saga*. When first conceiving of the *Newdawn* series, she was inspired by her desire to help people relate and envision our planet and our species in the challenges of the future. "Science fiction feeds our imagination and science facts shape our lives tomorrow to the point where science fiction become science fact." Understanding the role of science and technology in our modern world and how it will pave the way to future lifestyles and businesses in the years ahead is key to building a bridge between today and tomorrow. The *Newdawn* saga is more than a book, it's a whole new universe!

Newdawn Roamers: Prequel to the Newdawn Saga follows Tesh, our heroine, a traveler from the future who returns to the past to impact a different future. For the first time, she's free of the System, a Planetary Artificial Intelligence Neural Network that dictates her life and everything in the world in 2098. But in order to save her people and create a new future for the planet, she encounters tremendous challenges and must make tough choices that will affect her dying world. When Tesh joins the Origin

program to prevent a looming planetary crisis and the extinction of our species, she has to decide how far she will go to protect herself, her team, and the future of our planet – our civilization.

Newdawn Roamers, the first volume of the saga, spans multiple lifetimes and crosses into other realms. Fans of *Divergent*, *Hunger Games* and *Red Queen* will enjoy Luchart's intricate world building and sense of adventure from 2018 to 2098 and beyond. "[Amidst] twists and turns, great characters, time and space moving with speed and grace, wonderful internal, thoughtful dialogue, Dominique pens a fantastical world of too real today and a glimpse of a too real future", commented one reader. The *Newdawn* series also explores and showcases evolving technologies like biotechnology and robotics and science like genetic engineering continues to impact the human experience.

Luchart's goal is to create an immersive community where readers can interact with one another and engage with the *Newdawn* world to participate in the path to our future. Aside from delivering a riveting story filled with twists and emotion, *Newdawn Roamers: Prequel to the Newdawn Saga* highlights essential questions about our responsibility to the planet, ethical, scientific exploration, and maintaining humanity in a world where technology reigns.

The book's trailer can be found here:
