

After Trump's ban, Americans are switching into a new app

UUP, first whatsapp-style messaging application that does not require emails or phone numbers

New York City, Jan 17, 2021 ([Issuewire.com](https://www.issuewire.com)) - **Donald Trump** banned from **Facebook** and **Twitter** for alleged irregularities in compliance with the ban on publishing content with "hate speech" messages. The news is going around the world for the enormous importance that such a decision can have but not everyone has really understood the gravity of the situation and the implications that such a decision, arbitrarily taken by the top of American companies, can have on the democracy of Worldwide.

With **Uup** this is not possible: Uup is the first whatsapp-style messaging application that does not require emails or phone numbers to be used so it cannot be traced back to who is using it. You can get in touch with other users who use Uup simply by exchanging your "public key" or an alphanumeric encrypted code and from that moment you can send and receive messages, photos, videos, audio messages or make calls and video calls, using the protocols Bitcoin cryptography or the safest cryptography in the world! With Uup therefore NO ONE is able to "understand" the content of the messages and to understand who is the sender and the recipient.

This aspect offers a new scenario for the conception of social aggregation environments, also ideal in work environments where it is necessary to preserve the confidentiality of information: for example, imagine the company that needs to create a communication group or work task with its managers but wants the certainty of not being "listened to" to protect its industrial secrets. Now, imagine even sharing sensitive information among political party or government administration members with such a guarantee of data protection.

No leaks. No interference. No manipulation.

UUP wouldn't have been possible, if not for the technical expertise and efforts of one of the most brilliant minds in the blockchain industry - Daniele Marinelli - and his team.

The team is creating a cutting-edge IT security infrastructure, resulting in the app named UUP, now downloadable on all [iOS](#) and [Android](#) devices. Such application is meant for governments, military structures in friendly countries, hospitals, banks, and companies where security is indispensable.

Daniele Marinelli is an expert in the creation of [disruptive ecosystems](#) based on blockchain. He is the architect of the European Union's social network infrastructure that aims to be more democratic and does not depend on big tech companies. It will be an eco-system that gives the power back to the consumers with a strong focus on data privacy.

Daniele was invited to Palm Beach by [George G. Lombardi](#), a close aide of the U.S. Government, to discuss the details of the app and its deployment in an effort to protect user data from unscrupulous hackers. They discussed ways to cooperate with the development of the app, adding more than just messaging features, such as social features that include interactions on groups and pages and a variety of useful tools for everyday activities.

UUp is open to mathematicians, researchers, and scientists working in communications security. Any initiative undertaken to improve the technology is received with arms wide open by Daniele's team, which is also open to sharing the source of their security algorithms to support parallel research for the development of related cybersecurity technologies.
