

Digital/Analog Speedometer, Qibla finder & Compass

Enhance driving skills with Digital/Analog speedometer

Karachi, Jan 11, 2021 (Issuewire.com) - The decision to enhance the driver's focus on driving leads Join App Studio to develop Digital/Analog Speedometer, Qibla Finder & Compass app for its users. And if you are a kind of person that don't like to take speed risks on-road then JAS is the type of partner that develops speed limit apps with speed alerts and HUD feature to minimize distractions.

Join App Studio is enhancing its portfolio by stressing the focus on providing seamless and robust features through its GPS-based apps. Our apps are driven by a quest to provide hassle-free GPS services to our clients worldwide.

To cater to the client's need, JAS has introduced a HUD - Heads up display feature in its speedometer app. This feature uses the smartphone's camera to cast a reflection of the vehicle's speed on the car's windshield.

The release of this speedometer app empowers the drivers with a higher level of control over the steering wheel. Another feature includes the Qibla locator to display the accurate direction of Khana e Kaaba on the mobile screen, while the GPS compass manages to show the real-time GPS location of the user's current location. Other new addition includes portrait/landscape mode with Analog and Digital display.

A unique of its kind of speedometer app allows drivers to stay more focused during driving.
