

LEOWAY 2WD E-Scooter – E-King of the Urban Jungle!

Gelderland, Apeldoorn, Jan 27, 2021 ([Issuewire.com](http://www.Issuewire.com)) - The world's first electric scooter LEOWAY 2WD with an innovative i-2WD Control Module.

More freedom! More confidence! More safety!
Campaign LEOWAY E-Scooter launched on Indiegogo:

<https://igg.me/at/leoway>

The innovative i-2WD Smart Traction Control Module was developed specifically for the Dual Drive E-Scooter. LEOWAY E-Scooter has two motors, but only the rear motor works continuously. This allows you to significantly save battery power and increase mileage.

For riding an e-scooter on a smooth surface, such as asphalt or concrete, one motor wheel is enough. But, for safe riding on rough, slippery, or loose surfaces (curb, hill, grass, pebble, sand, etc.) or to accelerate it is necessary that two motor wheel work. To do this, an innovative i-2WD Control Module has been developed that automatically activates the front motor wheel by analyzing the signals of the wheel rotation sensors. Due to this, the rider can confidently and safely ride regardless of the terrain and road surface.

LEOWAY E-Scooter combines the main advantages of a single motor electric scooter (lightweight, high

mileage) and a dual-motor electric scooter (powerful, safe riding).

LEOWAY 2WD e-scooter has two lithium-ion batteries with a total capacity of 721Wh, which allows you to ride up to 90km/56miles on a single charge. One battery is removable and its weight is only 1.36kg(3.0lb). You can take several of these with you and increase your mileage.

Each battery has its own charging port. Two chargers allow you to fully charge two batteries in a record three hours. It is roughly the same amount of time your smartphone would need. If you want to ride long trips then LEWAY 2WD is your choice.

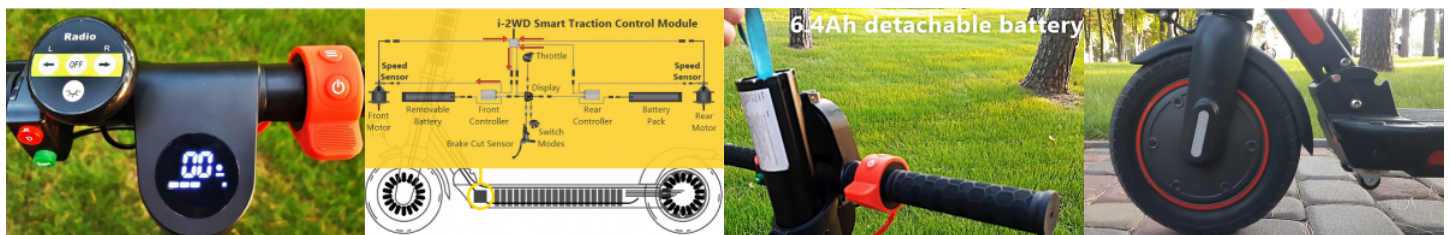

The powerful LEOWAY E-Scooter easily overcomes climbs up to 25 degrees. If you happen to live in a hilly area and you're considering buying an electric scooter, then LEOWAY 2WD E-Scooter powered by long-lasting batteries and two high-torque motors a total of 500-700W will be perfect for you.

Order LEOWAY E-Scooter now on Indiegogo:

LEOWAY 2WD E-Scooter equipped 10-inch tubeless pneumatic tires, can smoothly ride through bumpy roads, they give better ride quality. Inside the tire is a special sealant. If a nail or screw punctures a tire, the mechanical process forms a plug within 2-3 tire rotations. It acts so fast most riders would be unaware of a puncture.

LEOWAY E-Scooter has a dual braking system that provides for good stopping power. The electromagnetic brake of both wheels based on regenerative braking during the quick release of the throttle. A hand disk brake cuts off the power supply to the motor wheels instantly and allows you to brake at any time.
