

Monsam Enterprises introduces New Portable Sink and Sanitizing Station

Ultimate Tool for Fighting COVID-19

California, Los Angeles, Jan 28, 2021 ([Issuewire.com](https://www.issuewire.com)) - Hand Washing Gets Rid of Germs

When you come in contact with certain viruses and bacteria, including the COVID-19 virus, those germs

can stay on any surface you come in contact with. You can then infect yourself by touching your face, particularly your nose, mouth, and eyes, and even spread these germs to someone else. To slow the spread of COVID-19 and protect yourself and your loved ones, be sure to wash your hands every time you might have come in contact with germs or any time they are soiled. Creating a lather of soap and water on your hands creates micelles, pockets that trap germs, remove them, and rid your hands of other dirt and chemicals.

Soap and Water Can Be More Effective than Hand Sanitizer

Hand sanitizer is a great way to kill germs because it is alcohol-based. However, the CDC and other similar agencies recommend using hand sanitizer as an alternative only if you don't have easy access to soap and water to wash your hands. Hand sanitizer is good in a pinch but will not eliminate all types of germs.

Monsam's New Portable Sink and Sanitizing Station Increases Hand Washing Accessibility

One limitation of handwashing is that your hands might become soiled while you have no access to a sink, soap, and water. Portable handwashing and disinfectant stations help eliminate this problem by creating a compact, lightweight way to bring sinks to untraditional locations. MONSAM's new [portable sink and sanitizing station](#), in particular, is ideal for both indoor and outdoor use. It is equipped with all sanitizing needs, including a paper towel holder, disposable glove holder, sanitizer holder, soap dispenser, and a convenient trash bin. MONSAM's portable handwashing and the sanitizing station provides hot and cold running water and is outfitted with an antibacterial countertop, further preventing the spread of germs, bacteria, and viruses. The station is lightweight, making it easy to move from place to place, and can be upgraded to be completely hands-free with a faucet motion sensor or footswitch. Workplaces from outdoor construction sites to restaurants to hospitals can take advantage of this portable hand washing and sanitizing station to make hand washing and sanitizing more convenient and accessible. Many stores now require people to sanitize before entering the store to shop. This is because customers will touch many things and can spread countless germs, even if they are only in the store for a short while. Placing a handwashing station outside a store's entrance would allow customers to remove as many germs from their hands as possible before entering the store, thereby reducing the spread of viruses and bacteria to other shoppers, store employees, and beyond. With a portable handwashing and sanitizing station, the opportunities to make stores, restaurants, outdoor gatherings, and festivals, and workplaces safer are endless.

Best Handwashing Practices

To wash your hands most effectively, follow these steps; First, turn on the sink and wet your hands. Using some hand soap, scrub your hands, wrists, fingers, and under your nails for at least 20 seconds. After rinsing your hands with clean water, dry them with a paper towel, clean cloth, or by letting them air dry. Remember, the best handwashing practice is consistency, meaning that you must be sure to wash your hands every time you potentially come in contact with germs or come in contact with anyone.
