

## The data protection that you are waiting for has arrived on IndieGoGo Keep your Confidential Data Hidden with The New X

Keep your Confidential Data Hidden with The New X-Mask Memory Card Solution From Flexxon.

**Singapore, Jan 16, 2021 ([Issuewire.com](http://Issuewire.com))** - Flexxon improvises advanced features into the memory card that keeps the data invisible to the unauthorized users as long as the “Mask” is on!

Singapore: Flexxon has launched an Indiegogo campaign for the new security memory device, the X-Mask. To strengthen the data protection and enhance authentication of confidential data, the best idea is to keep it hidden. The X-Mask microSD card is the prime solution to refrain unauthorized access to harm the stored data. Now get the Multifunctional Card Holder as a complimentary gift with the X-Mask microSD card.

The Flexxon X-Mask Memory Card ensures the highest level of protection for the saved data. To make sure all the records are stored and invisible, you need to enable Flexxon Security Tool to conceal

unauthenticated access. Without the tool installed into the device, none can see the card and the device will be considered illegal. Only after the installation of the security tool and the correct password will give you access to the recorded files.

Get the X-Mask provides excellent performance, high reliability, and wide compatibility. As long as the “Mask” is on, your data will be hidden and password protected so that the information cannot be stolen, read, changed, or deleted by random people.

## The Advanced Features of Flexxon X-Mask Memory Card

The following three layers have been attributed to enhancing the security strength of your stored data within the X-Mask memory card:

- **Invisible Card:** Hide crucial data and keep the files password-protected to make it invisible from prying eyes.
- **Security Mechanism:** Enable access only to the legal computers or the system by the optimization of the security tool.
- **Data Encryption:** Protect the records with data encryption is done using data scrambling and hash algorithms in the firmware level and protects the side-channel attacks.
