

Upcoming Book Entitled "Astrobiology & Space Medicine" Will Be Published Soon in 2021.

Compiling the Knowledge of Space Science with Modern Biotechnological and Medical Sciences.

Chandigarh, Jan 8, 2021 (Issuewire.com) - Space and the universe are always being mysterious with full of secrets and questions like; How life emerged? What was the source of energy which embarked the life in organic molecules? Does alien life form exist? Are we alone? What happens to astronauts when they are traveling in space? Can we terraform dead and barren planets?

Which always fascinates us and inspires us to dig deep into space science and astrobiology.

For answering all your questions, we have come up with our upcoming book which will unfold the deepest concepts of space science, solve mysteries, provide you with interesting and fascinating facts about space and astrobiology with the knowledge of the world's greatest scientist compiled in one place all together.

In this book, we have tried to present the complexity of space and astrobiological science in an easy manner for our readers to understand various abstract concepts.

Astrobiology is motivated at its core by the goals of understanding the origin and evolution of life on Earth, the potential of life for future expansion into the cosmos, the incidence of habitable planets in the cosmos, the stability of Earth's present habitable environment, and the frequency and complexity of life elsewhere in the universe. This book explores this aspect.

Acknowledgments:

Authors: Amartya Nandi, Kanav Sharma, Bhaskar Raghu Puri, Suddha Swatta Chaudhari, Miral Lohia, Ruchika, Rashmi, and Arin Tiwari.
