# Webroot.com/safe | Enter Webroot Key Code - Webroot Install

**Webroot.com/safe**

**Florida, Miami, Jan 23, 2021 (**Issuewire.com**)**  -  Webroot Secure is cloud-based antivirus software that is developed by Webroot Softwares and was first launched in the year 2006. Using the software, you can easily protect your computer from viruses, trackers, and malware. The software is available for all the major platforms Windows, Mac, Android, and iOS, and can easily detect and remove all kinds of viruses and other threats from your computer. To download Webroot for your device, go to www.webroot.com/safe or webroot.com/safe.

**Features of Webroot**

- A cloud-based antivirus program.
- Fast scans.
- Protection against zero-day attacks.
- Identity-theft protection.
- Malware protection.
- 70-day money-back guarantee, etc.

**How to Download Webroot for Your System?**

Downloading the Webroot software for your system is very easy, and all you have to do is go to www.webroot.com/safe or webroot.com/safe and download the installation file. But before you download the software for your system, make sure that:

- Your device meets the system requirements.
- You have carefully gone through the license agreement.
- Your internet connection is stable.
- You have your keycode ready. You can find it on the box that you received when you purchased the product or in the purchase confirmation email along with your receipt if purchased online.
- You have uninstalled the previous/older version of the software.

If your system meets these requirements, then follow these steps to download Webroot on your system:

- Open your browser and go to www.webroot.com/safe or webroot.com/safe.
- Next, enter your registered email id and keycode.
- Wait for the download to get completed.

How to Install Webroot on Your System?

Follow these steps to install Webroot on your system:

**For Windows:**

- Double-click on the Webroot installer file.
- Next, enter your keycode in the Webroot installation wizard and click on the "Agree and Install" button.
- If you want, you can also customize your installation using the "Install Options" button in the installation wizard.
- Now you will be asked to enter your email id. Enter the email id and click on "Continue."
- Now the installation wizard will start the installation of Webroot on your computer.
- Next, follow all the on-screen instructions and wait for the installation process to get completed.
- Once the installation process is complete, you will be notified by the Webroot installation wizard.

**For Mac:**

- Double click on the Webroot installer file.
- Now drag the Webroot icon to your application folder.
- Next, open the application folder and double-click on the Webroot icon to start the installation process.
- Select your preferred language and click on the "Next" button.
- Now enter your Webroot keycode and click on the "Activate" button.
- Enter your email id and click on the "Continue" button. However, if you don't want to give your

email id, you can click on the "Skip" button.
- Enter your system password and click on "OK."
- Now create a Webroot account. Note: You can skip this step if you are not going to use the password management feature of Webroot.
- Once you click on the "Create Account" button, you will be redirected to the Webroot account creation page by your default browser.
- Next, enter all the necessary details and click on the "Register Now" button.
- Install the Webroot Secure Anywhere Web security browser extension on safari by clicking on the "Install" button. Note: If you have purchased the Internet Security Plus edition of Webroot, then you have to install another extension named "Webroot Secure Anywhere Online Password Management" extension.
- Once you have installed both extensions, you can use the password management feature of Webroot.
- Now, wait for the installation process to get completed.
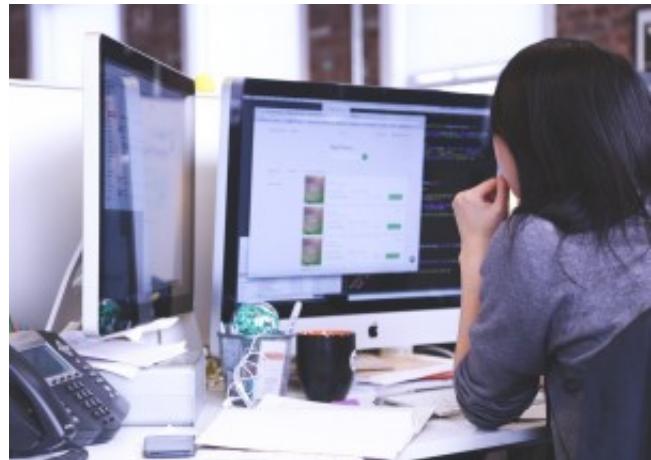

## How to Activate Webroot on Your System?

Follow these steps to activate Webroot on your computer:

## For Windows:

- Open the Webroot app and click on the gear icon.
- Enter your keycode and click on the "Activate" button.
- Now you have successfully activated Webroot on your system.

## For Mac:

- Launch the Webroot app.
- Click the gear icon near "My Account."
- Enter your keycode and click on the "Activate" button.
- Now you have successfully activated Webroot on your system.
