

A new global Mega Industry is emerging in 2021. BLOCKCHAIN ROBOTS will soon be building “Next Level” HOUSING at 80 TIMES

British Columbia, Vancouver, Feb 1, 2021 ([Issuewire.com](https://www.issuewire.com)) - Blockchain Robots Accelerate Construction to 80 Times the Speed. The world's newest industry: Automated Construction leverages Blockchain-enabled Robotic Builder Drones, IoT and Digital Twins to accelerate construction to over 80 times the speed with ZERO WASTE. Global construction enters a new era.

11 years since the emergence of Bitcoin, Blockchain is now set to disrupt yet another industry. At 10 Trillion per annum, Construction is the world's least digitized industry. In 2010, a small group of engineers and software developers in Alberta Canada were working to automate construction when they made an amazing discovery. As they continued developing the robotic building system, bitcoin came into the picture, and the concept of the “blockchain digital twin” was born. That new discovery will save the construction world trillions in wasted time and materials. As a result Blockchain, Automated Construction emerges as the world's newest industry. The resulting industry promises incredible new housing solutions.

The shelter is a basic necessity. As per the Economic Research Council, the global construction industry is expected to reach \$10.5 trillion by 2023 and is forecast to expand at a CAGR of 4.2% from

the year 2018 to 2023.

UNIVERSAL HOME FINANCING through blockchain.

Inefficiency and lack of trust are major problems in home construction verticals. Blockchain digital twins enable industry stakeholders across the globe to access identical, accurate, valid information without middlemen. The new tools pave the way for much-improved homeownership models. With homelessness increasing every year, the potential for a vast improvement in this area is obvious.

THE AC TECH STACK: 10 YEARS DEVELOPMENT:

A global group of companies is contributing to AECROS: Architecture, Engineering, Construction & Real Estate Operating System. AECROS uses blockchain-enabled robots to build at 80 Times the speed. Building units and equipment are tracked with the IoT, tokenized, and recorded as Blockchain Digital Twins. Modular Building Units (MBUs) are customizable, prefabricated building blocks integrated with dynamic functions.

SPACE AGE TECH *meets* SHELTER

The components of the new AC industry read like a laundry list of technology buzzwords. Teams from across the world are creating the new tech stack which integrates the Internet of Things (IoT), Blockchain Distributed Ledgers, Proof of Location, LoRa (LPWAN) Beacons, New Sensors, Robotics/Techtronics, Phase Space Control Software, and 5G. Vast new potentials await.

DISASTER PROTECTION: Waste-free construction of green buildings that protect their occupants against Hurricanes, Fires, and Floods. The energy efficiency of these buildings is the next level.

BLOCKCHAIN DIGITAL TWINS streamline a myriad of legacy systems. The representation of physical assets as digital tokens on the blockchain converts the value and specifications of these real-world assets, enabling exchange and logistics in real-time.

The AC INDUSTRY: TOKENIZING CONSTRUCTION.

The Membership Placeholder, (MP) is an ERC-20 token implemented to streamline the construction supply chain and its financing. The entire global AC ecosystem supports this tokenization. MP owners become the defacto "building suppliers" as they trade into the block supply, access homes, power & data networks, and even electric air transportation services. Token-based assets are exponentially gaining widespread acceptance and housing will no longer be an exception.

ACBM: Mandate to Provide Shelter: The Auto Construction industry has a full set of operational tools to re-create legacy construction systems. ACBM sets new standards for both construction quality and housing availability. 2021 makes history as ACBM Systems are ushering in the new era of Universal "Crypto" Housing.
