

Air-tow Trailers: New 14,000 LBS. Drop Deck Capacity Trailers

Drop Deck Trailers with up-to 14,000 LBS Capacity

California, La Verne, Feb 11, 2021 ([Issuewire.com](https://www.issuewire.com)) - [Air-tow Trailers](https://www.airtow.com), the manufacturer that revolutionized the trailer industry with ground-loading technology, now offers models with 14,000-pound capacities. Every model in the Air-tow line lowers flat to the ground for simple and safe loading of all types of equipment. Air-tow Trailers make it easy to load with a pallet jack or transport heavy equipment without hassle.

The new [14,000-pound](#) capacity models offer the most carrying power of any ground-loading trailer on the market today. They are offered in two styles, [flatbed](#), and [utility](#). The usable deck space is 16 ft long and 6 foot 3 inches wide that is equipped with 8 heavy-duty D-rings. [The utility model \(UT16-14\)](#) has the added benefit of 24-inch walls and the option for a swinging gate. Simply lower the deck with one button, drive your large equipment onto the trailer, then lift the deck with one button and drive off.

If the ability to carry 14,000 pounds isn't enough, Air-tow Trailers also come with the smoothest suspension on the road. Air-tow's exclusive swing-arm axles operate independently with FTR suspension. This rubber suspension system can withstand shock loads at maximum capacity without bottoming out, which greatly reduces forces transmitted to the trailer frame and cargo. This means you and your equipment are being protected during every stage of the transportation process.

Call Air-tow Trailers at 800-479-7975 or visit [Airtow.com](https://www.airtow.com) for more information about ground-loading technology and order your 14,000-pound capacity trailer today.
