

ATX Solutions has Introduced New Digital X-ray Equipment for Better Diagnostic Results

A new way to capture full-spine and long bone studies in less than 3 seconds

Australia, Western Australia, Mar 18, 2021 ([IssueWire.com](https://www.issuewire.com)) - Say goodbye to those long waiting times for full spine or leg length studies because within 1 second you can achieve a quick image acquisition with the Longtail – the latest innovative x-ray technology from ATX Medical Solutions. With over 30 years of experience, ATX Solutions has evolved with a profound knowledge of X-ray equipment and its services. The company takes pride in offering a high level of service with unlimited user support to ensure maximum benefits. Recently, a team of experts has initiated the use of this new digital X-ray equipment installed at Capital Radiology in Morley, Western Australia. Clients may ask for the relevance and importance of this newly installed system. Well, to answer their query, Regional Manager at Capital Radiology WA, Joel Scaddan, identified, 3 key features worth mentioning include the following:

- Speed - patients are in and out within 5 minutes so no bookings required;
- Accuracy – no overlapping errors or patient movement compared to other conventional ‘stitched’ systems; and
- Reduced dose compared with stitched systems – due to no overlapping of images and the removal of the anti-scatter grid depending on patient body habitus.

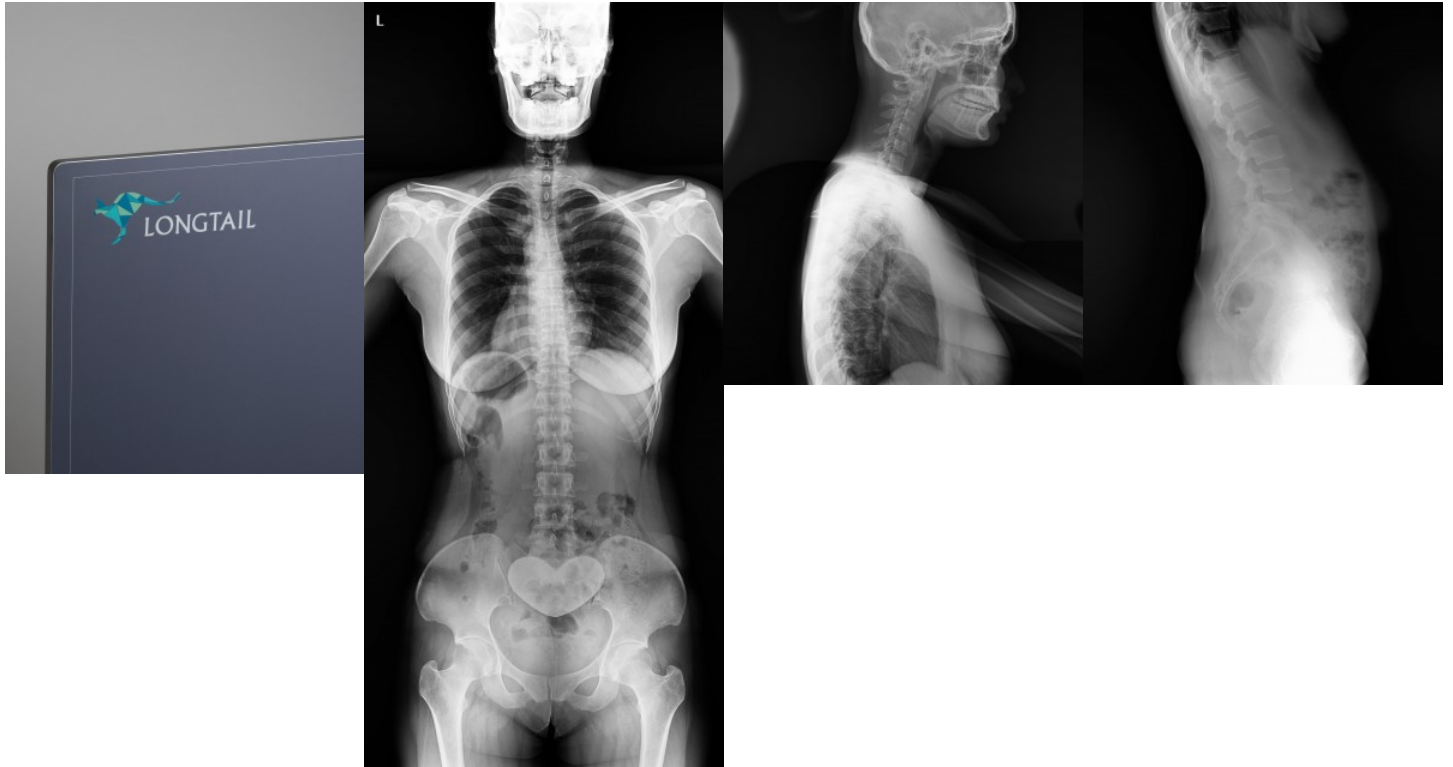

So, what does this all mean? In a nutshell, the Longtail **digital radiography** system delivers the highest image quality, geometric accuracy whilst reducing the amount of radiation with no image overlap received by the patient per diagnostic study. Moreover, practitioners will find it more convenient as they are now able to deliver swift diagnostic results. Managing Director Roger Davis commented the Longtail will supersede existing technologies for full spine imaging systems that are subject to excessive dose, multiple exposures, and software image adjustment techniques that may compromise the diagnosis.

Being a specialist supplier, ATX Solutions has established itself as a leading radiographic imaging equipment provider. While directly addressing the New Zealand, Australia, and Southeast Asia markets it also has established distributors in the US and Europe. The company aims to source quality equipment and technology solutions - without the hefty price-tag – providing practitioners with the tools to deliver patient care with confidence.

This market leader also manages other services associated with the equipment such as – installations, pre-purchase advice on safety, hardware, and software, ensuring its team of service engineers is trained with the latest technology to offer seamless assistance to users and doctors. Once you opt for the digital radiography system from ATX Solutions, you will receive full-service support plus options including cloud PACS image storage, and an extended warranty.

The company has earned a 5-star rating on Google with more valuable reviews. The team is always ready to support their clients – when help is most needed.

The website of ATX is now accessible to all those who want to avail themselves of their products and services. The team is well-versed in handling customer queries and they keep it convenient for clients by offering excellent conversation over the phone and email.
