

BINARC Expands IT Audit Offering with New Open-Source Software Compliance Program

Move Comes as Microsoft, Other Major Tech Companies Agree on International Standards

Virginia, Arlington, Feb 10, 2021 ([IssueWire.com](https://www.issuewire.com)) - BINARC is pleased to announce its new open-source software (OSS) compliance program that dovetails with [Microsoft's recent move to ensure conformity with OpenChain 2.1\(ISO/IEC 5230\)](#) – the International Standard for open-source license compliance.

The OSS component of BINARC's IT audit can protect organizations of all shapes and sizes from an array of often neglected—but potentially devastating—legal and regulatory risks.

The move represents an expansion of BINARC's broader partnership with [Zenius Corp.](#) that produced a [new methodology for Client-Initiated Audits](#) – i.e. comprehensive, integrated IT and financial audits. Heading the new OSS program for BINARC is [Julian Coccia](#), a globally recognized authority on all things OSS.

"Companies are increasingly turning to open-source software for free, stable add-ons to their proprietary code," explained [Danny Harris, Ph.D.](#), Senior Strategic Advisor to BINARC and former U.S. Department of Education CIO. "However, far too many do not understand or comply with the open-source licenses that contain use and security requirements. Others are unaware that any such requirements even exist."

"In effect, the audit resolves compliance and security issues before they even surface," added Coccia. "This frees our clients to focus on their business and mission."

BINARC is a small business delivering customized IT solutions to improve efficiency, security, and remote work capabilities for public and private sector entities across the nation. We are a Microsoft-certified Partner with a proven track record of utilizing best-of-breed products and tools to solve complex IT challenges. For more, visit us at www.BINARC.com.
