

Circadence Helps Employees Return to Work Safely, Announces Re-Opening of Tupelo, MS Office

PROJECT ARES®
BY CIRCADENCE

Mississippi, Tupelo, Feb 16, 2021 ([Issuewire.com](https://www.issuewire.com)) - [Circadence Corporation](#), a market leader in cyber training and education, announced today it will re-open its Tupelo office in Mississippi after closing in 2020 due to the COVID-19 pandemic. The re-opening will be in accordance with health and safety guidelines from the [City of Tupelo](#), [Mississippi Department of Health](#), and [Center for Disease Control](#). The office is slated to re-open on March 1, 2021.

The company, which provides hands-on learning scenario labs for educators to teach and enterprise security officers to train cyber professionals, has established roots in the Tupelo business community. The business has been conducted out of the Tupelo office for 16 years with more than 18 Circadence employees working out of it, including personnel in the accounting, human resources, federal services, and engineering departments as well as senior leadership. Network, systems, and software engineers work to provide federal government clients with cyber readiness services to support their business objectives and goals. Likewise, Inside Sales and human resource activities are also conducted out of the Tupelo office.

“Circadence is taking all necessary precautions to re-open its Tupelo office and ensure the health and safety of our employees,” said Michael Moniz, CEO, and co-founder of Circadence. “Employees now have the option to work out of the office while [practicing everyday preventative actions](#) as advised by the CDC to protect themselves and others from the spread of COVID-19. Being a part of the thriving Tupelo business community is a critical component to the fabric of our business and we are very excited to re-open for employees who are able and comfortable working in the office,” he says.

The company anticipates an increase in cyber training demands requiring additional staffing internally to

support cyber readiness requirements among enterprise and federal services organizations. In response, Circadence has prepared for those forecasted needs by posting several job openings in the Federal Services division headquartered in Tupelo as well as Engineering and other departments across the company. These job postings bring forth opportunities to professionals in Tupelo and surrounding areas, although many are open to remote candidates too. To learn more about the open positions, visit <https://circadence.com/jobs>.

“The work conducted in the Tupelo office helps Circadence continually innovate on solutions to elevate cyber education and training in the marketplace,” said R. Bradley Prewitt, Executive Vice President of Government Relations and Development. “Re-opening in Tupelo allows Circadence to continue being a trusted partner in the prosperous business community while supporting educators like those at [Milam Elementary](#) and trainers looking to make learning cybersecurity skills hands-on and accessible from anywhere during these uncertain times,” he said.

Circadence has two other offices in addition to its Advanced Research and Development facility in Tupelo, Miss. Other office locations include Boulder, Colo. Headquarters, and San Diego, Calif., Center for Cyber Autonomy and Data Science, plus staff who work across the country. Tupelo is the only office out of the three that is re-opening at this time.

ABOUT CIRCADENCE

Circadence® Corporation is a market leader in cybersecurity education and training. Powered by a culture of innovation and the demands of an evolving cyber landscape, Circadence offers cyber range learning labs to educators and enterprise security officers across the globe who are looking to teach cybersecurity and train professionals in the practice. [Project Ares by Circadence](#) is an award-winning platform that provides hands-on cybersecurity labs that enhance competency-based education for teachers and reinforce readiness objectives for trainers. Its authentic library of threat scenarios are immersive and reflect contemporary threat incidents.
