

MoneyMoov Payments Inc. and Findora Foundation Ltd. Join Forces for Innovative Solutions in the FinTech Sector

Ontario, Toronto, Feb 15, 2021 ([IssueWire.com](https://www.issuewire.com)) - MoneyMoov Payments Inc. ("MoneyMoov" or the "Company") is pleased to advise that it has entered into a strategic alliance with Findora Foundation Ltd. ("Findora").

MoneyMoov and Findora intend to work together to explore, develop and launch more landing scenarios within the Fintech industry, including fund transfer, payment, transaction validation, confidential transaction, confidential asset tracing, user data protection and security, and to further promote the adoption of financial transactions and data security applications.

"Findora's zero-knowledge proof-based technology is an industrial leader and pioneer in entering the market implementation," Head of Growth at Findora, Matt Arney said. "With MoneyMoov, we will have the ability to explore ways to simplify the payment and KYC process with the balance of privacy, auditability, and compliance requirements. In theory, customers will never face any leakage as in this technology, payment processors keep zero knowledge from customers in the transactions."

"I believe that Findora is perfectly positioned to address some of the industry's most significant challenges," said Chairman and CEO of MoneyMoov, Andre Itwaru. "Findora has the secret sauce with its focus on supporting the creation and distribution of digital asset tokens and utility tokens, along with its abilities to facilitate confidential, compliant financial transactions. At MoneyMoov we are focused on deploying leading-edge financial transaction solutions that are in full compliance with regulatory guidelines. This is an exciting collaboration of two innovative companies working together, and we are focused on being leaders in the Fintech sector."

About Findora Foundation Ltd. (www.findora.org)

Founded in 2017, Findora is an open, private financial network that is owned and democratically secured by a decentralized network of worldwide organizations and economically incentivized parties. Using Findora, developers can create digital assets, applications, and smart contracts which can transparently preserve confidential information using advanced cryptography. Findora is a market leader in zero-knowledge proof and multi-party computation technologies with strong distributed system engineering capability.
