

## NoteDex: The First-Class Android App for All Your Note-taking Needs

# NoteDex

**California, Los Angeles, Feb 9, 2021 ([IssueWire.com](https://www.issuewire.com))** - Introducing a first-class note-taking app that makes you want to buy an Android tablet! NoteDex is the most intuitive note-taking, index card, and flashcard app available for Android. Launched in December 2020, NoteDex is ideal for project professionals, students, writers, and visual thinkers to create, organize and collaborate.

NoteDex comes from the same team that developed the #1 'Index Cards' app on Windows. Based on the Index Cards concept and supercharged with technology, NoteDex will become one of the few quality cross-platform pen-enabled note-taking apps available. Aware of the need for quality apps for Android devices, the NoteDex team intentionally created the Android app first.

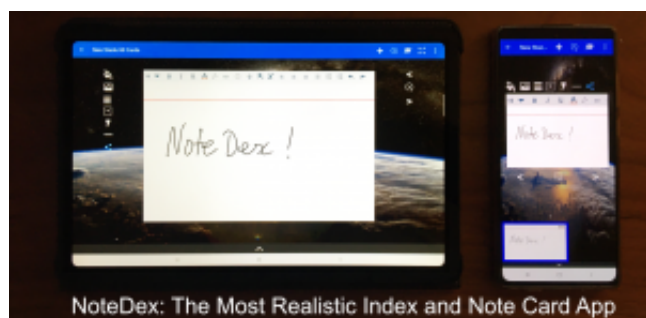

NoteDex lets you create note cards with:

- Digital ink using a stylus pen
- Add text using the keyboard
- Add images
- Add web links
- Change the Color of the cards and ink
- Organize cards by folders or tags (category labels)
- Search, sort, and filter
- Share to a friend or colleague on the web to collaborate

NoteDex for Android is available on the Google Play store globally for \$4.99 USD, currently discounted from \$9.99 USD as part of introductory pricing. The Power-User in-app purchase also available for \$4.99 USD and enables users to share stacks on the web with password protection and gives the option to enable the 'edit' capability so people can easily collaborate on a shared NoteDex card stack together.

In addition, NoteDex Web will be released soon, with iOS and Mac coming later this year. NoteDex Web will have feature parity with the Android app – and will be a full-featured note-taking web app that you can use on any computer with any web browser, including Google Chrome, Apple Safari, or Microsoft Edge. Ideal for non-Android users or users around-the-world without access to the Google Play store, NoteDex Web will allow you to create cards with richly formatted text, images, and even digital ink. You will be able to organize cards by folder groups and with category tags, use Study Mode, and share stacks using the web app just like on the Android app. NoteDex Web will be available exclusively as part of the upcoming Professional subscription plan for \$4.99 per month, coming Q2 2021.

*NoteDex is created by Sundaram Applied Technologies, Inc. in Silicon Beach, Venice, California, focused on developing apps that help boost creativity and consciousness.*
