New York, New York City, Feb 4, 2021 ([Issuewire.com](https://www.issuewire.com)) - Regal Investments successfully completed a new round of software testing with their Regal Masterboard. The Masterboard is software that synchronizes with the web to analyze decades of data and make investment recommendations. With a most recent success rate of 94%, if the software delivers on its performance, it can usher in a new era in the financial world.

The Masterboard predicts stock performance based on trends and patterns. The software which has been in development for 4 years, develops strategies via a continuous influx of real-time data. Users simply input the dollar amount of an investment along with the investment goals, then the Masterboard will try to make an accurate recommendation.

Regal Investments expects testing to be completed later this year, with a beta version of the software being made available to the public this upcoming spring.
