

Speechelo, the game-changer text to speech software

Presentation of a revolutionary text to speech software based on Artificial Intelligence.

California, Los Angeles, Feb 1, 2021 ([IssueWire.com](https://www.IssueWire.com)) - Since the dawn of humanity, people would gather around the fire and listen to stories. That's why a good video is not efficient without a good voiceover that tells the story.

The problem is that not all of us have a stunning voice like Morgan Freeman, or we don't feel comfortable in front of a microphone.

There is the opportunity to hire a professional voice artist, but there are two main problems:

- It is expensive, as it could cost more than \$100 per minute;
- It is not fast, and it could take 5+ days per record.

Luckily, there is a new text to speech software available. Its name is [Speechelo](#), and it uses AI to simulate 50 kinds of voices, either male or female, from all over the world.

The AI of Speechelo permits the software to understand what each phrase is saying and calculate the right inflection that it should use while reading and recording.

This game-changer text to speech software knows when to emphasize words or when to take a breathe, and it is easy to use!

The base text to speech software works with just three steps:

- You digit or paste your text;
- You chose the language that you want to simulate;
- You click on the Generate button to download your audio file.

The file generated with this text to speech software works perfectly for training videos, presentation videos, and trailers. You can use the output file in software such as Camtasia, Adobe Premiere Pro, Audacity, or iMovie, DaVinci Resolve, and others.

Speechelo allows you to increase or decrease the speaking rate of the reading, optimizing the pace phrase by phrase, or to higher or lower the volume of the words, or emphasize a specific part of the text.

As mentioned before, the AI behind [Speechelo](#) perfectly recreates accents from all over the world, with either male, female, or child voices.

Here is a list of some of the languages supported:

- US English;
- British English;
- Indian;
- Spanish;

- French;
- Portuguese;
- Portuguese (Brazil);
- German;
- Italian;
- Hindi;
- Japanese;
- Norwegian;
- Arabic;
- Russian;
- Cantonese;
- Mandarin;
- Turkish;
- And many more!

You can have Speechelo clicking on the link <http://bit.ly/speecheloPR> for a ridiculous discounted rate. You don't need to pay for a monthly subscription plan as the price is a one-off-fee. Speechelo has 60 days money-back guarantee and will refund all your money and let you keep all the voiceovers created!
