

U.S. Patent Granted To Leading Edge SaaS Company

California, San Francisco, Feb 8, 2021 ([Issuewire.com](https://www.issuewire.com)) - Trisk, the leading edge SaaS company that allows subject-matter experts to streamline communication, compliance, and data collection, is at it again.

Known for its relentless focus on improving and adding new features, Trisk has been granted a U.S. patent for systems and methods for data collection with blockchain recording.

Trisk specializes in data collection, management, tracking, and control with a blockchain. This new patent is further evidence of how their users will be able to collect, manage, track, or control one or more data objects between two or more nodes.

Multi-functions available to users is a top priority for Trisk. That includes a strong focus on security in a time when users want to know who and what has access to their data. This new patent provides further evidence that Trisk is committed to allowing users to have control of their experience.

About Company:

Trisk is a no-code software that allows subject matter experts to interact with clients in real-time to streamline data collection and compliance with easy automation and 100% security.
