

New Global Partnership Announcement

Global Technology Market (GTM) is partnering with Aireagoir to offer its Bunus (Virtual Security Cloud as a Service) and security services to its clients and managed service providers

Nevada, Las Vegas, Mar 22, 2021 ([Issuewire.com](https://www.issuewire.com)) - - Global Technology Market (GTM) is partnering with Aireagoir to offer its Bunus (Virtual Security Cloud as a Service) and security services to its clients and managed service providers (MSPs) who are challenged by current offerings in the market and evolving threat landscape. MSPs are on the front lines of protecting their clients against data breaches, malware, ransomware, and other attacks for which they are often unprepared. To address these threats, Aireagoir is providing its security expertise and portfolio to MSPs in partnership with GTM to bring them a secure cloud platform, the needed tools, and professional services that will strengthen their security posture and better protect both themselves and their clients.

"Aireagóir has organically built a market-leading position in offering Bunus and Managed Services, it's an exciting time for the company as they near reaching the stage where they can see a case for raising investment," said John Roman, Partner, GTM. "I look forward to growing the partnership and being part of the continued rapid growth of Aireagóir."

"As the data protection needs of businesses continue to evolve, and our MSP partners and enterprise customers turn to us as a trusted technology vendor and partner, we believe that offering a best-in-class security-focused cloud platform is essential," said John Roman, Partner, GTM. "With Aireagoir and Bunus, we have found a partner that shares our dedication to data protection and a solution that meets enterprise customers' needs."

Bunús Platform is the foundation on which Aireagoir offers partners and their clients to build effective solutions and services. Bunús is a secure cloud offering where their data is encrypted, secure, and controlled, and owned by the client. We wrap our services approach, controls, and security around our managed services. Let Aireagóir do the work so that your business can optimize. With Aireagoir business' can extend the Bunus Platform to the world's most advanced encryption, powered by

Tèarainte, we offer customers the possibility of total data access control while providing data at rest and data in transit protection.

Bunús (Gaelic for foundation) provides an all-in-one service for building a private cloud infrastructure. This includes everything you need in storage, compute, networking, virtualization, and management. Our fully integrated, secure cloud software solution was built with simplicity, security, and completeness in mind.

"This is a great example of how we're continuing to work closely with our partners and have them accelerate their opportunities across the entire customer experience," said Grady R Johnston, CEO, Aireagóir. "As customers reimagine their applications, transform their infrastructure, empower their teams, and secure their data - our entire portfolio is partner ready."

"Medium-size & Enterprise businesses are looking to MSPs as their trusted technology advisor, and with this responsibility comes the need to protect them from the ever-increasing threat landscape," said Grady R Johnston, CEO, Aireagóir. "They are open targets for cybercriminals and often the least prepared. MSPs are now on the front lines of protecting their clients against data breaches, malware, ransomware, and other attacks and often are feeling unprepared. Aireagóir brings the needed protections to the business discussion."

"We are very fortunate to have such a partner that is focused on its clients, ready to help strengthen our strategic positioning as we continue to support the delivery of a secure cloud service with our innovative technology," said Grady R Johnston. "We are very excited to continue our growth journey and for the future direction of Aireagóir."

About Aireagóir

Aireagóir helps clients maximize the power of the cloud to drive agility and innovations for their hybrid IT estate.
