

Asus Router Setup Guidelines | Asus Router Login

Asus Login Steps

Texas, Houston, Apr 26, 2021 ([IssueWire.com](http://www.IssueWire.com)) - It comes up with a simple and user-friendly installation. You can get the full installation guide with pictures on router.asus.com. Here I am just providing you the basic knowledge of installing the Asus router.

- Firstly, you have to reset the router to factory state if the router is already used before and skip this step for the new router.
- You have to then visit the Web interface of the router by typing the address 192.168.1.1 or <http://router.asus.com>. Then click on “GO”.
- Setup your router’s admin name and password as asked in the next stage that is the [Asus login](#) page. This is for the security purpose of your router. Click the “next” button.
- Now the router will check the connection automatically. It will take only a few minutes to end up.
- The next step will be to select the internet connection type. As this is a full replacement of TM provided router, PPPOE will be used. Therefore, select “Yes” when you are prompted with this page.
- Now you will be asked to fill up your connection name and password. Now click the “apply” button.
- The next and last step is testing. If the above steps are followed properly, you will be able to see the indicator as “Connected” and thus you are successfully done. If you configure any problem and it is not showing as connected then you can just visit [router.asus.com not working](#) for more support and full procedure followed with images.

Thus this router comes with a fully-fledged Wi-Fi range over a certain network with full VPN support and security measures. You can now also control your network just via a single button on your app and via mobile device. It is also safe for your family and children because you can now get access to what they can surf and what not. The product is also easily available online to purchase.

The second method to set up the Asus router is using the WPS button. This method is easy compared to the manual setup. We are hereby providing steps to do a WPS setup as well. WPS setup method If your computer or laptop supports or has a WPS button then the easiest method to connect to the router is this. To perform this, press the WPS button on your router and within two minutes press the WPS button on your wifi device. Wait till they both get synchronized. The WPS light on your router gets stable when the connection is made successfully. Get in touch for more information on the WPS method. If you need any help with Asus wireless router then we are here to help you out. Our experts can solve any issue related to this router such as [Asus router setup wizard](#) not responding, you forgot the Asus router account sign-in details. Now, Aimesh routers setup is a bit different from the normal one. Let's discuss that now.
