

## Bringing Social Activities to the Blockchain

18digits.com launches the 18D Token

**Switzerland, Zug, Apr 16, 2021 ([IssueWire.com](https://www.IssueWire.com))** - Strictly following their philosophy Proof Of Social Activities (POSA), [18digits.com](https://18digits.com) has taken the next step towards a social, independent and rewarding platform: The launch of the 18digits Token (18D) – the platform utility token of the social network 18digits.com. Until now registered users received 18digits points as a reward for their social activities. These points can now be converted into 18D Token. The social activities of 18digits members are now documented on the Blockchain (Binance Smart Chain).

The 18D Token works on our concept **Proof Of Social Activities (POSA)**. POSA is our new coin mining consensus coined by 18digits.com. 18D are distributed only when users perform community-building activities on 18digits.com: NO initial supply, NO pre-mined coins, NO founder wallets, NO ICO. This ensures a fair launch and distribution, where everyone can participate and earn 18D by contributing to build and grow the 18digits community.

“Rewarding every single individual for their work and contributions to 18digits stays our main focus,” said Bertram Seitz, CEO & Co-Founder of 18digits.com. “18D can already now be converted into other cryptocurrencies on Pancakeswap exchange. Our next step is to build multiple utility options for 18D by enabling 18D as a payment option for several products on 18digits.com and partner services.”
