

ILOCX is pleased to announce the listing of iLamp

iLamp is the world's first super smart street lamp

New York, New York City, Apr 27, 2021 ([Issuewire.com](https://www.issuewire.com)) - Conflow Power Launches iLamp on the ILOCX

We are pleased to confirm that the premium listing for iLamp has gone live on the ILOCX platform, Conflow Power Group Limited has issued 650,000 units sharing 10% of the iLamp global sales revenue for the next 4 years, at the end of this period the company has the option to buy back the units or extend the license for a further term. The initial issue price per license is \$10.00.

iLamp has launched a pre-order feature at www.iLamp.com where you can reserve one of the first intelligent lamps on the market for a 100\$ refundable deposit.

iLamp is a world first, a smart lamp with unique *combination technology* to literally stack symbiotic products, services and capabilities into smart street lamps that are capable of providing everything its predecessor offers and a lot more. iLamp can be fully off-grid, with on-grid options using the grid as a backup (in circumstances where electric vehicle 'EV' charging is required).

iLamp runs a 360-degree high-resolution camera, gunshot detection, ANPR, WIFI, in-built analytical tech, its own payment gateway for automatic revenue generation, drone, electric bike, and scooter recharging as well as weather sensors, traffic monitors all of which are revenue-generating.

iLamp is a cost-saving, environmentally friendly, revenue-producing piece of real estate, and it's available to everyone.

iLamp could be used in your front yard, next to your garage, in a parking lot, small businesses and large-scale projects all the way to municipalities and government installations. With a global licensing model created by ILOCX iLamp can grow into a new location super-fast.

In an ambitious plan to make smart cities all over the world one pole at a time. The strategy is for distribution and multi-location-based sales including sourcing and manufacturing via its range of licensing options. Any person can buy one, and start generating revenue, they can also buy the ILO and start generating revenue, semi-passive and aggressive, qualified purchasers can buy territories, cities, and country-based licenses to organise, sell, manufacture and install iLamp in individual sales as well as commercial projects.

This is a meticulously planned initiative. The design, spec and financial structure of the iLamp is its own ecosystem, bringing smart tech, smart combinations, smart power, and smart financial structure to make the smartest outdoor lamp on the planet. There are 1.2 Billion homes on the planet and automatic power is the driver and the differentiator. iLamp will bring new levels of security, communications, and eco-driven revenue instead of hugely harmful environmental costs on top of the monetary cost and therefore loss.

New homes demand modern technology and environmental safeguards, bringing smart street lamps to residential developments adds many benefits not to mention higher values.

Smart city projects have struggled, maybe because they are too big, we can have smart cities now, get into iLamp in any way and contribute, we call it 'ROI' *return on involvement*, the ILO is priced at \$10.00 and to reserve an iLamp its \$100.00 so the entry-level is low, and the reward is a significant part of all our collective futures.
