

iNMENU brings simplified and mobile-friendly digital menus for restaurants all over India

India, Jharkhand, Apr 8, 2021 ([Issuewire.com](https://www.issuewire.com)) - Responding to the challenging scene of COVID-19 facing restaurants and other businesses, a young Indian entrepreneur from Jamshedpur, Ashish Budhraj has launched iNMENU that builds easy to use digital menus for Restaurants, Bars, Cafes & other businesses that customers access and view on their mobile phones.

iNMENU does not charge any setup fees and the monthly subscription fees are affordable for all sizes of Restaurants starting from Rs. 49/month. There is also no charge for making any changes to the menu.

Once the restaurant's digital menu is ready, owners can print free QR codes and customers simply point their smart phone's camera at it to open a restaurant's menu. iNMENU also provides an opportunity for restaurants to accept orders and payments online. They can also accept takeaway and delivery orders by just promoting their digital menu URL.

A customer does not have to download any new application to view menus — they are redirected to a Web Browser that shows the digital menu.

“Irrespective of the traditional menu system, iNMENU offers extreme convenience with an added benefit of cost savings. iNMENU's digital menu is customized and all the changes in terms of design, price, available items, special offers, etc can be done in real-time” says iNMENU Founder & CEO, Ashish Budhraj.

As the process is touchless, the possibility for cross-contamination is secured.

iNMENU's platform is designed for both restaurants and any other type of business that needs to let customers know about what's available — including health care, entertainment, hotels, casinos, salons, sports and education.

iNMENU's Key features include:

- Unlimited menu items, categories and add-ons
- Accept online payments
- Accept Takeaway and Delivery orders
- Upload item images and logos
- Customers can add an item to the cart they are interested in, making their order quicker
