

Innovative backend framework Encore now Open Source

After years in stealth development, Encore is now public.

Sweden, Stockholm, Apr 6, 2021 ([Issuewire.com](https://www.issuewire.com)) - Encore is an innovative backend framework with superpowers, for a radically improved developer experience and productivity building cloud applications.

[Encore](#) has been in the making for three years, created by senior Ex-Spotify engineers, and has been in use by early users for the past year. In order to better support more users on a global scale, [Encore has now been released as Open Source Software](#).

André Eriksson, the founder of Encore, made this comment:

“Open sourcing Encore is a big step toward our vision of creating a more productive and enjoyable way of building backend applications. Growing an active Open Source community is key to ensuring technical quality, and accelerating innovation with Encore as the foundation.”

About Encore:

Encore helps you create modern cloud backend applications at an incredible pace, without compromising on scalability.

Encore lets you create backend services, define APIs, and call APIs all with a single line of Go code. It automatically instruments your application with Distributed Tracing technology for superior observability, automatically generates API documentation and type-safe API clients, simplifies secrets management, and even automates setting up your cloud infrastructure.
