Oftentimes all of us find ourselves in situations and scenarios where we feel the weight of the world on our shoulders.

Worries of not meeting deadlines, targets, and expectations – set by both ourselves and by those around us, are like ghosts lurking in the shadows, waiting to take us by surprise, catch us off guard and weigh us down.

Finding oneself struggling in these situations, with our nerves getting the best of us, is not a sign of weakness, on the contrary, it is a sign of our innate humanness. Our ability to be vulnerable in the face of troubles, to evolve in the face of obstacles is as old as civilization itself.

However, just like we supplement our immune system with medicines in fighting sickness, it is necessary to alleviate the stress and worry that comes with our routine lives, because while some degree of stress is positive, called '**eustress**', as it helps meet deadlines, stay focused and keep track of our progress, there is also another facet to stress, called 'distress'.

Distress is a negative extremity of stress that is not conducive to productivity and in fact, acts as a hindrance to it, and it is this stress that has some counterproductive and pervasive short-term and long-term effects on physical, mental, and emotional well-being.

The repeated biological reaction of the body to distress, i.e, irregularly fast beating of the heart, rapidly rising blood pressure, sharpened senses, and contraction of muscles among other reactions over a long period of time can lead to:

- Erratic mood swings
- Degrading health
- Persistent and crippling anxiety
- Imbalanced relationships
- Lessened quality of life
- Loss of focus and motivation
- Consistence emotional distress

Persistent and frequent stress can add fuel to the fire in cases of existing health problems including, **(but not limited to)** :

- Depressive disorders
- Chronic pains
- Sleep problems (insomnia)
- Autoimmune diseases (compromised immunity)
- Digestive problems
- Skin conditions (such as eczema)
- Cardiovascular diseases
- Loss of appetite
- Weight issues
- Reproductive complications
- Cognitive issues (thinking, comprehension, memory retention, etc.)

The list is long and there are innumerable issues and problems that arise with distress and overthinking. The key to safe sailing in such situations is to maintain a positive mindset full of optimism as it helps you to stay motivated and focused and avoid pointless sorrow, and overcome obstacles. If you've read so far and felt a sense of relatability, then it is time to no longer let distress come in the way of your creativity and productivity, using the [Sacred Sound Healing system](#).

Q. What is the Sacred Sound Healing system?

Before we delve into what the program is, it is pertinent that we mention that while the Sound healing system may be news to some of you reading this, the science of Sound Healing itself, is age-old. The sacred sound healing program uses methods of sound healing that have their roots in ancient Chinese beliefs and principles.

The developer of the Sacred Sound Healing system discovered the power of sound in healing when he had hit his own personal and emotional rock bottom. And that is what makes the Sacred Sound Healing system both tried and tested.

The magic of stress alleviation simply by listening to 60-seconds of audio, sounds unrealistic. So to establish the effectiveness and efficiency of the sacred sound healing system, it is important we break it down and explain what its foundations are and how it works.

Q. How does the Secret Sound Healing system work?

Enough about the principles behind the program, now it's time to talk about what the [Sacred Sound Healing system](#) is and what it constitutes.

One of the best things about the Sacred Sound Healing system is that the science behind it is no rocket science, it simply works on the basis of energies. It functions on the basis of a unique Biofield energy healing technology, the essence of which is that everything in the universe radiates energy. The technology interacts with our energetic bodies via our biofield.

Now unbeknownst to many, all of us innately have a biofield. This Biofield surrounds our bodies and is directly connected to our conscious and subconscious minds

It is a well-known fact that energy through vibrations is the language of the universe. All that we see, feel, perceive, contact and conceive is unadulterated energy; smaller, denser pieces of energy, better known as particles, that vibrate as per the laws of creation.

The basic idea behind vibration in the Sacred Sound Healing system is the principle of reverberation. Reverberation can be defined as resonance, a continuing effect; a repercussion.

The whole universe is conditioned to operate on energies, that are constantly in vibration. Every organ, cell, bone, tissue, and ligament of the body and the electromagnetic fields that encompass our human body have a strong vibratory reverberation and repercussions.

If this resonance is imbalanced, it leads to us becoming like empty vessels, making unpleasant sounds, as our regular frequencies turn into vibrations without congruence, hence resulting in sickness.

Q. What is in the Sacred Sound Healing Program?

All of us are guilty of depending on music as part of our everyday routine. We listen to our favorite songs time and time again, both when we are happy and sad because music has a way of calming our nerves and giving us a sense of comfort and belonging. This power of music and sound is exactly what the Sacred Sound Healing system uses.
